Publication Policy
The provisions of this catalog do not constitute a contract, expressed or implied, between any applicant, student, or faculty member and the Texas Tech University Health Sciences Center School of Medicine, including any of the institution's regional campuses. The Texas Tech University Health Sciences Center School of Medicine reserves the right to change or withdraw courses at any time. It also may change fees, calendar, curriculum, graduation procedures, and any other requirements affecting students. Changes will become effective whenever the proper authorities so determine and will apply to both prospective students and those already enrolled.

All information in this catalog is the sole responsibility of each respective department, school, program, office, etc. Other than admissions requirements and regulations, the TTUHSC School of Medicine Office of Admissions is not responsible for the content of those respective counterparts. Every effort is made to obtain the most current information at the time of publication from those individual entities.

Equal Opportunity Statement
The School of Medicine is committed to a policy of equal opportunity for all, and will not discriminate on the basis of race, color, religion, age, sex, national origin, disability or veteran status.

Notice of the Annual Security Report
Every year in October, Texas Tech University Health Sciences Center releases the Annual Security Report in compliance with the federal law identified as the "Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act."

The report contains statistics about certain specified crimes and related incidents that have been reported to the Texas Tech Police Department and other campus security authorities for the previous three calendar years. The report also contains policies and practices pertaining to campus security, crime reporting, alcohol and drugs, victims' assistance programs, student discipline policies, campus resources, community safety alerts, crime prevention, access to campus facilities and properties as well as personal safety tips.

Click here to download the latest annual security report.

To request a paper copy of this report, contact the Texas Tech Police Department by email at police@ttu.edu or by phone at 806-742-3931 during normal business hours, 8 a.m. – 5 p.m., Monday through Friday.

All inquiries regarding admission to the School of Medicine should be addressed to:

TTUHSC Mission
The mission of the Texas Tech University Health Sciences Center is to improve the health of people by providing educational opportunities for students and health care professionals, advancing knowledge through scholarship and research, and providing patient care and service. The Texas Tech University Health Sciences Center fulfills its higher education mission by achieving the following Institutional Goals:

- Train competent health professionals and scientists
- Increase externally funded, peer-reviewed research, especially NIH-funded research, and research focused on aging, cancer, and rural health
- Improve access to quality health care for TTUHSC’s target populations
- Prepare health professions students for an increasingly diverse workforce and patient population
- Provide leadership in the development of partnerships and collaborations to improve community health
- Operate TTUHSC as an efficient and effective institution

TTUHSC Vision
Texas Tech University Health Sciences Center will be recognized nationally as a top-ranked health sciences university.

TTUHSC and School of Medicine Statement of Diversity

TTUHSC
The Texas Tech University Health Sciences Center is committed to fostering a diverse, equitable, and inclusive environment that values and embraces the different ethnicities, races, cultures, ages, abilities, sexual identities, and systems of belief that comprise the TTUHSC community. We are steadfast in our commitment to cultivating a workforce that is equipped to meet the evolving healthcare needs of all those living in our communities.

At the TTUHSC, we strive to:

- **ENCOURAGE** all students to meet their full potential and inspire positive change.
- **ENLIGHTEN** the TTUHSC community about diversity issues.
- **EMPOWER** all students to openly be their most diverse self within a culture of acceptance.
- **EMBRACE** all cultures, races, backgrounds, abilities, and identities.

School of Medicine
The core foundational value of including the diverse cultures, lifestyles, personal beliefs and ideas of all those we serve – and serve alongside – provides a positive impact on the health of our regional, national, and global societies. As we pursue excellence in healthcare education, research, and patient care, we will be ever mindful of the strength that is gained through unity in diversity.

School of Medicine Mission
Founded in 1969, the TTUHSC School of Medicine has continually worked to address the shortage of physicians in West Texas by providing innovative educational opportunities to medical student and residents that are intended to supply competent and compassionate medical professionals for a geographically expansive area. The medical education program provides sound interdisciplinary training that integrates basic sciences knowledge and clinical skill and focuses on high standards and comprehensive evaluation. The research strategy of the school concentrates on collaborative efforts that enhance the clinical programs relevant to the region and provide advanced training opportunities for students and residents. Centers of excellence guide research endeavors in many areas giving special attention to cancer treatment, women's health, aging, addiction, and other disease processes. The clinical practice strives to utilize state-of-the-art technology to effectively meet the growing needs of a diverse and largely rural patient population through strong partnerships with clinical affiliates.

School of Medicine Vision
To be recognized regionally and nationally for innovation and collaboration — great people with great ideas.

Texas Tech University Health Sciences Center and Lubbock
The Texas Tech University Health Sciences Center School of Medicine was created by the 61st Texas Legislature in May 1969, as a multi-campus regional institution with Lubbock as the administrative center and with other regional campuses at Amarillo, El Paso, and Odessa. The lack of a single focus of population density dictated the regionalization of medical education in West Texas, which comprises 48% of the landmass of the state and encompasses 12% of its population. The School of Medicine is one of five schools in the Health Sciences Center. The other four being the Schools of Nursing, Health Professions, Pharmacy, and the Graduate School of Biomedical Sciences. All five schools are committed to regionalized, multicampus educational experiences.
The School of Medicine formally opened in August of 1972 with a first-year class of 36 and a third-year class of 25 students. The Texas Tech University Health Sciences Center was established in 1979, eventually ushering in the Schools of Allied Health - now known as the School of Health Professions, Nursing, Biomedical Sciences, and Pharmacy. From 1980 to 1994, the school accepted 100 first year students for a total of 400 in the student body. In 1993, class size was increased by the Texas State Legislature to 120 in each first year class beginning with the class entering in the fall of 1994. In 2000, the Legislature approved a class increase to 200; however, a smaller class size of 140 has been maintained through the entering year 2011. In 2012 the entry class size increased to 150 and remained at that size until 2014 when it increased to 180, where it remains today. Primary consideration is given to residents of Texas and the contiguous counties of New Mexico and western Oklahoma. Other out-of-state applicants may be considered on an individual basis if they have outstanding academic credentials.

The school has as its major objectives the provision of quality medical education and the development of programs to meet appropriate health care needs of the 108 counties of West Texas. The school has a fulltime faculty of 574 with 48 part-time faculty and 891 volunteer faculty. The goal of populating West Texas with physicians is currently being achieved with 20% of the region’s doctors having been trained at the Texas Tech University Health Sciences Center. TTUHSC is currently expanding even further, with the October 2003 legislation that approved a four-year medical school in El Paso. The goal of the School of Medicine, however, has yet to be reached. The region is still severely underserved in certain sections of the service area despite the presence of the HSC health care institutions scattered throughout the region. This is why special attention is paid to applicants who are from the West Texas.

Lubbock offers clinical experiences at University Medical Center, Covenant Medical Center, Veterans Administration Outpatient Clinic, Garrison Geriatric Care Center, and the Montford Psychiatric Prison Hospital. In January 2004, the Texas Tech University Health Sciences Center Academic Classroom Building was opened in Lubbock. The facility includes two large state-of-the-art auditoriums, along with a new histology laboratory that is also designed for computer-based curriculum. In 2007, a new 150,000 square foot medical pavilion was opened housing the ambulatory clinics for six specialties with plans for continued expansion and development.

**Amarillo Campus**

The Amarillo campus began in 1972 with the forming of the medical school in Lubbock. Elective rotations for students were performed in space borrowed from the Northwest Texas Hospital and the VA Medical Center. In 1975, the Amarillo HSC established its own permanent location. In 1978, the first medical school class of five students entered the Amarillo campus. That number has steadily risen over the intervening years, with 65 third- and fourth-year students allocated to the Amarillo campus in 2006 and 112 students allocated for the upcoming 2022-23 academic year. In Amarillo, clinical education is provided in area hospitals and health care facilities. These include Northwest Texas Hospital, Baptist St. Anthony Hospital, Don and Sybil Harrington Cancer Center, the Psychiatric Pavilion, and the Veterans Administration Hospital of Amarillo.

**Permian Basin Campus**

The Permian Basin (Odessa) campus was established in 1979 and serves as a resident training facility for the Permian Basin and surrounding communities in Family and Community Medicine, General Surgery, Internal Medicine, Obstetrics/Gynecology and Geriatrics. In the Midland-Odessa area, clinical sites are Medical Center Hospital (Odessa) and Memorial Hospital (Midland). Twenty-four third year and 24 fourth year students currently complete their clinical training on the Permian Basin campus.

**Medical Students and the Multi-Campus System**

The first two years (Phase 1) are offered on the Lubbock campus, contiguous with Texas Tech University. The recreational and cultural resources of the University are available to the medical students. For clinical studies, each class is currently divided with 56 students in Amarillo, 102 students in Lubbock, and 24 students at the Permian Basin Campus. Beginning in 2016 the Lubbock campus began offering third and fourth year (Phases 2 and 3) educational experiences at both University Medical Center and Covenant Health System.

Assignments to the regional campuses are based to the extent possible on a preference form that each student will complete prior to being assigned to any of the three campuses. At the beginning of the first year, there is an active orientation program that includes time with students with representatives from the respective regional campuses to which each student has been assigned. At each regional center, clinical students in their third-year rotate through the basic clinical clerkships in Internal Medicine, Surgery, Obstetrics/Gynecology, Psychiatry, Pediatrics, and Family Medicine. The students are provided a diverse experience in community hospitals and in the School of Medicine's ambulatory clinics. In the fourth year, students may take elective experiences at any of the regional campuses and at other institutions.

The educational program at each regional center is comparable as indicated by the number and types of patients seen by students and by student performance on measures such as National Board of Medical Examiners subject exams, oral examinations, departmental examinations, and clinical ratings by faculty. The goals of these programs are to develop competent, compassionate, professional
physicians who provide the highest quality of care for the citizens of West Texas and beyond, who participate in scholarly activity, and who provide academic and community leadership. To assure the best possible education, the School of Medicine holds all programs to high academic and professional standards. These standards include those promulgated by the Accreditation Council for Graduate Medical Education and the American Board of Medical Specialties.

Graduate Medical Education (GME)
In addition to the four-year curriculum leading to the M.D. degree, the Texas Tech University Health Sciences Center School of Medicine provides graduate training on all four campuses (Amarillo, El Paso, Lubbock, and Odessa). The specialty (residency) programs include Anesthesiology, Dermatology, Emergency Medicine, Family Medicine, Internal Medicine, Obstetrics & Gynecology, Ophthalmology, Orthopedic Surgery, Pathology, Pediatrics, Psychiatry, Surgery, Transitional Year, and Urology. The subspecialty programs (fellowships) include Pain Management, Cardiology, Geriatrics, Sports Medicine, and Nephrology.

For the latest detailed information on Texas Tech University Health Sciences Center residency programs, visit: https://www.ttuhsc.edu/medicine/graduate-medical-education/default.aspx

Accreditation
The Texas Tech University Health Sciences Center is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award baccalaureate, masters, doctoral, and professional degrees. Contact the Commission on Colleges at 1866 Southern Lane, Decatur, Georgia 30033-4097 or call 404-679-4500 for questions about the accreditation of the Texas Tech University Health Sciences Center. The Commission should be contacted only if there is evidence that appears to support the institution’s significant non-compliance with a requirement or standard.
Dean's Welcome

Steven L. Berk, M.D.
Dean of the School of Medicine

Under Construction
The Admissions Process

General Philosophy
Texas Tech University Health Sciences Center School of Medicine invites applications from qualified residents of the state of Texas and across the country. Only 10% of the class can be from out of state. It is the goal of TTUHSC School of Medicine to accept only those students who are guaranteed to complete the full four years of the curriculum based on citizenship or permanent resident status. Therefore, only applicants who are permanent U.S. residents or U.S. citizens will be considered for interview and admission. One hundred eighty students are selected for each entering class. This total includes all dual degree, early acceptance, early decision, special, or assured admission programs. The Admissions Committee carefully examines each application for the personal qualities and proven academic ability to determine potential as an effective and competent physician. If all other qualifications are equal, some consideration may be given to individuals with ties to the West Texas region. While evidence of high intellectual ability and a strong record of scholastic achievement are vital for success in the study of medicine, the Admissions Committee recognizes as essential the qualities of compassion, collaboration, collegiality, personal integrity, and the ability to communicate effectively as traits of the consummate physician. Letters of evaluation from pre-professional advisors and/or physicians are also considered, and the ability to balance academic achievement with extracurricular and or work activities is examined. Those applicants who possess both the cognitive and non-cognitive traits that indicate likelihood of academic and professional success are invited for personal interview. There is no discrimination on the basis of race, color, religion, age, sex, national origin, disability or veteran status. In 1997, legislation established that evidence of a financially or educationally disadvantaged background of an applicant may be considered in the total evaluation of the application.

At Texas Tech University Health Sciences Center School of Medicine, the Admissions Committee considers all experiences, attributes and metrics in the application process. TTUHSC School of Medicine follows the AAMC EAM model and Holistic Review Process.
In summary, a number of both cognitive and non-cognitive factors are used in the evaluation of applicants to medical school. No single factor is used exclusively to admit or to eliminate admission of an applicant to medical school. The Committee examines each applicant for overall suitability, and it makes an effort to select a class of individuals that contain a combination of varied backgrounds, interests and life experiences, resulting in a diverse, stimulating and broadening learning environment within the medical curriculum.

**Undergraduate Course Requirements**
At least three years of study (90 semester hours or the equivalent in quarter hours) from an accredited United States or Canadian college or university are required. A baccalaureate degree is required. Course work from non-U.S. or Canadian schools will be accepted only if it appears, with a grade, on the transcript of a U.S. or Canadian college or university as an individual course. "Lump sum" credit is not acceptable. All prerequisite courses for medical school must have been taken for credit at an accredited U.S. or Canadian college or university.

Specific course requirements have been kept at a minimum to allow and encourage the student to have a broad and well-rounded education. There are no specific requirements for undergraduate majors or minors. The Admissions Committee reviews the academic challenge provided by course selection and gives preference to students with a broad educational background.

**Prerequisite Course Listing**

<table>
<thead>
<tr>
<th>Required Courses</th>
<th>Duration</th>
<th>Semester Hours</th>
</tr>
</thead>
<tbody>
<tr>
<td>General Biology or Zoology</td>
<td>1 year</td>
<td>6</td>
</tr>
<tr>
<td>Upper Division Biology Biology Labs</td>
<td>1 year</td>
<td>6, 2</td>
</tr>
<tr>
<td>General Chemistry General Chemistry Labs</td>
<td>1 year</td>
<td>6, 2</td>
</tr>
<tr>
<td>Organic Chemistry Organic Chemistry Labs</td>
<td>1 year</td>
<td>6, 2</td>
</tr>
<tr>
<td>Physics Physics Labs</td>
<td>1 year</td>
<td>6, 2</td>
</tr>
<tr>
<td>English</td>
<td>1 year</td>
<td>6</td>
</tr>
<tr>
<td>Statistics as offered by Math Dept.</td>
<td>1/2 year</td>
<td>3</td>
</tr>
<tr>
<td>Biochemistry (may be used toward fulfilling the Biological Sciences or Chemistry requirement)</td>
<td>1/2 year</td>
<td>3</td>
</tr>
</tbody>
</table>

Pre-requisite courses must be completed by the time the applicant matriculates into medical school, not necessarily when the application is made. It is in the best interest of the applicant to have completed as many of the prerequisite courses as possible, however. Proficiency in verbal and written communication is essential. A basic knowledge of conversational Spanish is desirable, but is not required.

**Admission Timeline Recommendations & Required Deadlines**

<table>

</table>
| Fall | Freshman      | • Focus on grades, take no more than 15 hours of coursework  
|      |                | • Research and begin prerequisite courses: Chemistry, Biology, Physics, etc.  
|      |                | • No MCAT preparation  
|      |                | • Little or no health care exposure  
|      |                | • Join a premedical organization or society  

School of Medicine 2022 - 2023
<table>
<thead>
<tr>
<th>Year 1</th>
<th>Spring Freshman</th>
<th>• Focus on coursework, but begin weekly healthcare exposure</th>
</tr>
</thead>
</table>
| Summer | Freshman/New Sophomore | • Continue with coursework  
• Taking pre requisites during summer is not recommended  
• Focus on healthcare exposure |

**YEAR 2**

| Fall | Sophomore | • Focus on academics, prerequisites  
• Continue healthcare exposure  
• Establish solid relationships with mentors, professors, MDs, or other supervisors that could write Letters of Evaluation |
| Spring | Sophomore | • Begin researching medical schools, fees, towns of the schools  
• Begin research into formal MCAT preparation courses  
• Continue to focus on academics, healthcare exposure |
| Summer | Sophomore/New Junior | • Explore possible research opportunities, premedical academies, or other scientific internships  
• Take summer school courses if needed (not prerequisites)  
• Focus on healthcare exposure if no internship presents itself |

**YEAR 3**

| Fall | Junior | • Begin composing of personal statement for medical school application  
• Approach prospective letter of evaluation writers and seek feedback on performance under their supervision  
• Revisit degree plan to make sure nothing is missed  
• Sit down with pre-medical advisor to confirm status, receive guidance  
• Maintain good grades  
• Commence MCAT preparation (if Organic Chemistry I and Physics I have been completed)  
• Explore and prepare application for premedical academies |
| Spring | Junior | • Visit prospective medical schools  
• Continue preparations for summer internship applications  
• Prepare mentally, financially, logistically, for medical school application / interviewing season  
• Application for Texas State medical schools opens May 1  
• Early submission of application is recommended for prime interviewing opportunity |
- Remain active with premedical / service organizations
- It is recommended that the spring administration of MCAT is taken

**Summer**

| Junior/Early Senior | • Attend summer program or internship (Premedical Enrichment Program)
|                    | • Submit medical school applications, (main and secondary applications)
|                    | • Attend summer school to catch up with coursework (if applicable)
|                    | • Texas medical school interviews typically begin early to mid-August

**YEAR 4**

| Fall | Senior | • Continue preparations for medical school interviews
|      |        | • Maintain grades
|      |        | • Continue with healthcare exposure

| Spring | Senior | • Submit rank list of medical schools where interviewed. Due January 15
|        |        | • “Match Day,” the day when students discover where they will be going to medical school is Feb.1 (Note: non-residents, special programs acceptances begin October 15. Also, note that the TMDSAS medical schools begin rolling admission Nov. 15)
|        |        | • Maintain grades and course schedule in order to graduate on time.
|        |        | • (If not accepted) Sit down with premedical advisor and develop a plan as to improve application for next interview season. It is not recommended to wait to start doing this after mid-March.

| Summer | NA     | • (If Accepted) Travel, do some extracurricular activities
|        |        | • Prepare to move to respective medical school
|        |        | • Medical school classes begin early August

**Medical College Admission Test (MCAT)**

Completion of the Medical College Admission Test (MCAT) within 5 years of matriculation is a requirement for admission. The Admissions Committee recommends that the test be taken in the spring of the year in which application will be made. Registration information may be obtained from:

Phone: (202) 828-0600
Email: mcat@aamc.org
Web: [https://students-residents.aamc.org/applying-medical-school/taking-mcat-exam/](https://students-residents.aamc.org/applying-medical-school/taking-mcat-exam/)

**Application to TTUHSC School of Medicine**

In order for an applicant's application to be evaluated for a prospective interview, all aspects of the application must be submitted, received, and processed by the Office of Admissions. This process can take 4-6 weeks if everything required is submitted at the same
The following elements must be received by the Office of Admissions in order to constitute a complete application:

<table>

Texas Medical & Dental Schools Application Service (TMDSAS)
Applications will be available in May of the year of application and are due at the end of September or in October as TMDSAS deems necessary. All supporting documents (Letters of evaluation, transcripts, etc.) must be submitted by October 15 or November 15 as TMDSAS deems necessary. The main application can be accessed and submitted online from the Texas Medical and Dental Schools Application Service (TMDSAS). In addition, official transcripts and letters of recommendation should be sent to the application service office. TMDSAS also requires other logistical elements to be submitted. Please visit the TMDSAS website to learn more.

The TMDSAS application and more information on requirements is available at the following URL:

TTUHSC School of Medicine Secondary Application
TTUHSC School of Medicine also requires a Secondary Application. All applicants applying to the Texas Tech University Health Sciences Center School of Medicine are required to submit a completed Secondary Application. For more information, including Secondary Application questions, please visit the address below. Please note that there is a secondary application fee.

  Secondary application: [https://www.ttuhsc.edu/medicine/admissions/ttuhsc-som-secondaryapplication.aspx](https://www.ttuhsc.edu/medicine/admissions/ttuhsc-som-secondaryapplication.aspx)

File Evaluation & Interview
(June ~ December)
Each completed application will be reviewed by the Admissions Evaluation Committee and personal interviews will be offered to those students deemed most competitive for admission. All interviews are conducted at the Lubbock campus or virtually as deemed necessary by the office of admissions.

On the day of the interview, there is also an opportunity to tour the medical school and talk with students. Each applicant, who has been sent an interview invitation, and is applying through the regular MD program, is given two (2), 20-minute interviews; by members of the Admissions Interview Committee. Applicants who are invited to interview and are applying to a dual degree program or Family Medicine Accelerated Track (FMAT) are given at least three (3) interviews, two (2) for the medical school, and one (1) to two (2) or more, from the partnering program. Additional interviews may be scheduled for dual degree applicants. Note that virtual interview days may vary in experience due to the nature of a virtual setting.

After the interviews, the Admissions Selection Committee considers the applicant’s entire application in a holistic review that includes: scores and comments from the evaluator, interviewers and any other pertinent information. Any applicant who is offered an acceptance to medical school must accept or decline the offer in writing or by email.

Rolling Admissions Session
(October ~ December or January)
Beginning in the Fall of 2006, the Texas medical schools offered a dual rolling admissions / match system. During the rolling admission period, a medical school can make an offer of acceptance to any Texas Resident applicant who has interviewed. An applicant can potentially receive offers from multiple medical schools during this period. TTUHSC School of Medicine will be very proactive in recruiting desired applicants during this pre-match offer period. At the end of December or January, this process is suspended.
The Texas Match
(January – February or March)

TTUHSC School of Medicine participates in the match with the other Texas schools listed on the application form. The Match system in which TTUHSC School of Medicine has participated since 1999 will continue. All interviewed TMDSAS applicants, who are also Texas residents, whether they have been accepted to a Texas medical school during the rolling admission session or not, will enter into the Match. It is important to understand that an applicant does not give up his/her place in a medical school where he/she received an offer during the rolling admissions session (except for those from which the applicant withdrew prior to the match). Interviewed applicant preference lists and medical school rank lists are due in January or February. Match Day, the day where interviewed applicants find out about their status, will be in February or March. Results of the Match will be released by TMDSAS.

For complete and current information regarding acceptance and match information please visit the TMDSAS website: https://www.tmdsas.com/PLAN/medical/medical-admissions/

Development of Alternate Pool (TTUHSC School of Medicine)
(February or March)

After the Match, the Admissions Selection Committee, will formulate an official alternate pool from interviewed applicants that remain available after the rolling admission session, and the Match. Alternate pool notifications will be sent to applicants by email and applicants will have the option to decline the alternate pool. If they wish to remain an alternate, no action is needed. In the event an accepted applicant gives up his/her seat in the class, a replacement will be selected from the alternate pool. The applicants selected for the alternate pool are not placed in a rank order. Applicants may be selected from the alternate pool up until the beginning of orientation at TTUHSC School of Medicine.

Scholarship Information

TTUHSC School of Medicine offers competitive scholarships to qualified medical students. The Scholarship Committee meets semi-annually to award scholarships to deserving students. To receive a scholarship, a student must remain in good academic and non-academic standing for the entire academic year. A student must also complete the scholarship acknowledgement form and the acceptance form as described in the scholarship notification. All scholarships are a one-time scholarship award and are based on the availability of funds.

To renew a scholarship or to be considered for a scholarship, students must submit an application annually by April 30th and submit a FAFSA application to Financial Aid to be considered. Applications must be submitted to the location where your designated campus assignment is set, for the term you are applying for. Late application deadline is October 1st and late applicants will be considered on a first come, first served basis dependent on any unclaimed scholarships and cannot be guaranteed.

Matriculation Policies

Criminal Background Check

In order to provide a safe environment for patients, visitors, faculty, employees, and students at TTUHSC, the conduct of criminal background checks was instituted as of September 1, 2006. Compliance with this policy will be required of all prospective medical students. Criminal background checks (CBCs) allow the university to evaluate whether TTUHSC students are qualified, eligible, and possess the character and fitness to participate in clinical care and/or clinical rotation sites at TTUHSC or participating institutions.

Therefore, per the TTUHSC Operating Policy and Procedure 10.20, in order to complete matriculation to the TTUHSC School of Medicine, all prospective matriculants will submit a background check, through a prescribed vendor, to the TTUHSC Office of Admissions. Refusal to complete the self-disclosure or criminal background check will preclude the student from admission and matriculation. All criminal history provided is confidential and shall be protected from disclosure to the greatest extent provided by law. It must be noted by the applicant, that matriculation will be completed only after receipt and review of the release form, self-disclosure information, and receipt of the subsequent background check record indicating no criminal history, unless otherwise indicated. Where a record of criminal history exists, each prospective matriculant will be evaluated individually, and recommendations for enrollment, withdrawal or revocation of acceptance/admission will be made by the School of Medicine.

Admissions Policies for Non-Residents of Texas

Non-resident applicants to the participating TMDSAS Texas schools are not subject to the Texas Match. Acceptance begins October 15th. TTUHSC School of Medicine is a Texas state school and is required by law to have no less than 90% of the entering class made up of qualified Texas residents.
Determining Texas Residency

TMDSAS determines residency at the time of application. Applicants to TTUHSC School of Medicine must be a Texas resident at the time of application to be eligible for admission as a Texas resident. If however, reclassification as a Texas resident occurs after the deadline of the application but before matriculation into medical school, the applicant may be admitted as a Texas resident.

As stated by the Texas Higher Education Coordinating Board Rules & Regulations for Determining Residency Status:

If an applicant is a dependent (of parents, etc.):
- The residency of the parent who has custody at the time of application if parents are divorced;
- The residency of the parent who has claimed the individual as a dependent for Federal Income Tax purposes for the year in which the individual is applying and for the preceding tax year; OR
- The residency of the parent with whom the individual has resided for the 12-month period preceding application to medical/dental school.

To qualify as a Texas resident for application purposes, an independent individual 18 years of age or over who has come from outside Texas must reside in Texas and be gainfully employed for a 12-month period preceding the date of application to medical-dental school. Evidence must also be provided that the 12-month residence was for the purpose of establishing residence in the state and not for the purpose of attending an educational institution.

An individual 18 years of age or over who resides out of the state or who has come from outside Texas and registers in an educational institution before having resided in Texas for a 12-month period shall be classified as a nonresident student and will remain a nonresident as long as the residence of the individual in Texas is primarily for the purpose of attending an educational institution.

(Texas Higher Education Coordinating Board Standing on Foreign Student Residency)

Only those foreign citizens who are living in this country under a visa permitting permanent residence of who are permitted by Congress to adopt the U.S. as their domicile while they are in this country or have filed a declaration of intention to become a U.S. citizen are eligible to be classified a Texas resident if they have otherwise met the requirements for establishing residency.

Military personnel stationed in Texas are considered non-residents unless:
- The member was a Texas resident upon entry into the service and Texas continues to be his/her state of legal residence while in the military.
- The member abandoned his/her prior state of residency and established a domicile in Texas at least 12 months before applying to medical/dental school and the member has otherwise met the requirements for establishing residency.

A residence questionnaire MUST be filed if the state of residence has been changed while in the military.

Residency can change during the application period. All schools are notified at the time a change of residency occurs. Tuition is based upon residence status at the time of registration.

If Texas residency is questionable, it is necessary to complete a Residence Questionnaire so that proper residency may be determined. A copy of the Questionnaire may be obtained from the Texas Medical & Dental Schools Application Service (TMDSAS). A formal medical school application must be submitted to TMDSAS before the questionnaire will be processed. A final determination of residency will be sent to the applicant and the schools to which the applicant has applied.

For more information regarding residency please visit the following websites:

TMDSAS: [https://www.tmdsas.com/PLAN/medical/before-you-apply/residency.html](https://www.tmdsas.com/PLAN/medical/before-you-apply/residency.html)

Establishing Texas Residency

Under Texas state law, an applicant or enrolled student is classified as either a resident of Texas, a nonresident, or a foreign student. Residency for admission and tuition purposes at a public college or university in Texas is different from residency for voting or taxing purposes.

To qualify as a Texas resident, an individual who is a U.S. citizen or permanent resident immigrant must live in Texas for at least 12 consecutive months without attending any institution of higher education. Registration in a college or university in Texas during this 12-month period is interpreted under law as demonstrating only an intention to make use of the state's higher education system, and not an intention to establish domicile in Texas. An applicant or student who is claimed as a dependent on a parent's most recent federal
income tax return will be classified based on the parent’s qualification for residency. International students eligible to establish legal domicile in Texas may also qualify for Texas resident status.

An individual's residency classification is based on information from his or her admission application. If an applicant or student is classified as a nonresident and wishes to be reclassified as a resident, it is necessary to submit the Core Residency Questions form, which provides more detailed background information than is available from the admission application.

Core Residency Questions can be obtained via the TMDSAS website but a direct link is provided below: https://reportcenter.highered.texas.gov/agency-publication/blank-forms-templates/cfat-residency-corequestions/

Special Considerations

AAMC Early Decision Program (EDP)
The school does have a program whereby exceptionally well-qualified students can receive a decision on their applications by September or October in the year prior to matriculation. Applications from individuals requesting Early Decision must be completed by August 1, and interviews will be set up shortly thereafter. A person who applies for Early Decision commits to apply only to TTUHSC School of Medicine prior to September or October and commits to matriculate at TTUHSC School of Medicine if the position is offered. Applicants will be notified of the Committee's decision on or before the deadline set by TMDSAS in September or October. If an individual is not accepted under the Early Decision Program plan, that applicant will still be considered in the regular applicant pool and may also then apply to any other medical schools. Early Decision applicants to TTUHSC School of Medicine must have taken the MCAT and must be a Texas resident. Applicants may be given preference based on the competitiveness of their MCAT score.

Deferment of Matriculation
Under extenuating circumstances, an applicant who has been accepted for enrollment in the Fall may request, in writing, deferment until the following Fall. Such a request will be considered on a case-by-case basis by the Associate Dean of Admissions and may be granted for a period not to exceed one year. During the year of deferment, the student may not apply to any other medical school.

Application for Admission in Advanced Standing (Medical School Transfer)
Applications for advanced standing are reviewed and considered on an individual basis. Texas residents enrolled in good standing in LCME accredited U.S. or Canadian medical schools are eligible to apply. Such applicants must have written permission from their Dean of Student Affairs for possible transfer; may be interviewed before acceptance, and must have taken and passed Step I of the United States Medical Licensing Examination (USMLE-I) as conditions for acceptance in advanced standing.

The guidelines and criteria for advanced standing admission and the transfer application are available at: https://www.ttuhsc.edu/medicine/admissions/advanced-standing-admission.aspx

All applicants for advanced standing must be Texas residents with at least 90 hours of undergraduate study in an accredited U.S. or Canadian college or university. The TTUHSC School of Medicine does not accept transfer applications from students or graduates of schools not accredited by the Liaison Committee on Medical Education (LCME). The applicant must have completed the second year of medical school. Advanced placement into the fourth year is not considered. Applicants from related fields such as dentistry, or those who have taken medical basic science courses as a graduate student, may be considered on an individual basis, but may be required to apply as a first year student regardless of the degree field. A student, who has been dismissed from, or has withdrawn from another medical school, is not eligible for consideration unless the former school indicates in writing its willingness to reconsider the student for admission. A completed application and filing fee of $75.00 must be received by no later than May 1st.

Official transcripts from all undergraduate colleges, graduate schools, and medical schools must be submitted. A letter of recommendation and evaluation must be submitted by the Dean of the school where the applicant is currently enrolled.
Other Degree Programs

The Family Medicine Accelerated Track (FMAT) Program
For those students interested in pursuing a career in Family Medicine, TTUHSC School of Medicine offers an innovative curriculum that allows for completion of the M.D. degree in 3 years. The FMAT Program is 6 years total with the students proceeding directly into one of TTUHSC’s Family Medicine Residency Programs after completion of the 3 year M.D. curriculum. The F-MAT program will offer students a seamless transition between their pre-doctoral and residency training settings and curricula as they spend two years in Lubbock, followed by at least 4 years on the campus (Amarillo, Lubbock, or Permian Basin) where they will complete both the final year of medical school and three years of family medicine residency training. Students will be chosen from each TTUHSC School of Medicine first year class and will be notified of their selection early in the second semester of first year. Preference will be given to students with demonstrated interest in Primary Care/Family Medicine, academic performance (including grades from fall semester of year 1 placing the student in the top 50% of the class), as well as interviews with members of the FMAT faculty.

Web: https://www.ttuhsc.edu/medicine/admissions/fmat.aspx

The M.D. / M.B.A. Dual Degree Program
In this dual degree program, the student will receive both M.D. and M.B.A. degrees within the four years of medical school. The intent of this program is to produce outstanding physicians with additional insight into the intricacies of health care management systems, finance, economics and delivery. With this educational background, physicians will have an advanced business background to use as they develop their medical practices and begin their careers.

In the program structure, students will complete the 42-hour M.B.A HOM program in 18 months, including the summers before and after the first-year medical school curriculum. Six hours of this 42 hour program is coursework that is completed in the school of medicine. This is possible due to course offerings in-class and online, courses that are taught in an accelerated seven week format and coursework that is accepted from the school of medicine. The program requires students to begin the required (administrative) field experience during their second summer of study.

Areas of study include accounting, finance, leadership and ethics, management strategy, business decision making skills and methods, business information systems, as well as other core skills in the business curriculum. For a broader knowledge of the organizational context in which health care is provided, students will complete a four-course concentration in Health Organization Management (HOM) with emphasis on healthcare quality, efficiency, and payment systems as part of the program.

The M.B.A. (HOM) program is accredited by AACSB and is unique among accredited programs in that it can be completed in the four years of medical school. This accreditation assures the prestige and enhances the value of M.D./M.B.A.

There is a requirement by the Texas Tech University Graduate School that applicants to its graduate programs in the College of Business take the GMAT. For M.D./M.B.A. applicants this has been waived in lieu of the MCAT. Further information about M.D./M.B.A and other graduate programs offered through the Rawls College of Business Administration may be obtained by contacting:
The M.D./Ph.D. Dual Degree Program
For those students interested in pursuing a career in academic medicine as a physician-scientist, enrollment in both the School of Medicine and the Graduate School of Biomedical Sciences (GSBS) is available. A program of study has been designed to permit the student to complete the requirements of both the M.D. degree and the Ph.D. degree. Accepted M.D./Ph.D. students will receive scholarships during School of Medicine study and a Research Assistantship during Ph.D. study as well as tuition (medical and graduate program) scholarships throughout the combined degree program. This program is designed to be completed in seven to eight years and will provide the student with rigorous training in both clinical medicine and biomedical research.

Application Procedures
Students apply through Texas Medical & Dental Schools Application Service (TMDSAS) http://tmdsas.com/ and indicate on the application interest in the M.D. / Ph.D. program. It is highly recommended that the student mention their research interest in their personal statement submitted with the TMDSAS application. This information will assist the GSBS in selecting appropriate faculty to interview the applicant. A secondary application is also required and information can be found at https://www.ttuhsc.edu/medicine/admissions/ttuhsc-som-secondary-application.aspx

Admission
Students who have been admitted to the M.D. / Ph.D. program begin graduate studies during the summer session preceding their first year of the medical school curriculum. During the summer session, major emphasis is placed on introduction to research with the goal of selecting an advisor and a research problem to be developed as the student's Ph.D. dissertation research. Students have the option of entering the Ph.D. program fulltime after the second or third year of medical school.

Research Honors Program
This program has been established to provide an opportunity for selected medical students to pursue an in depth research program with a faculty member of their choice. This Research Honors elective requires one year in addition to the four basic years of the medical curriculum and normally occurs between the second and third medical school years. While no credit toward graduation is granted during this year of enrollment, successful completion of the program will be acknowledged by the designation of "Research Honors" on the student's diploma. A variety of financial support mechanisms are available for this research experience.

The M.D. / MPH Dual Degree Program
The Master of Public Health Program at TTUHSC will prepare health professionals to practice skillful and evidence-based preventive public health; conduct and communicate research that informs the diverse fields within public health; and provide disciplinary expertise in the service of academic, professional and community-based public health organizations. The joint program is completed in four or five years (45 credit hours) and culminates in both the MD and MPH degrees.
The M.D. / M.S. Dual Degree Program
TTUHSC medical students in good academic standing who are interested in the M.D./M.S. program should contact the GSBS Office for further information. To formally apply to the M.D./M.S. program, the applicant should submit a written request to the GSBS Senior Associate Dean, Michael.blanton@ttuhsc.edu, and cc research mentor and graduate_school@ttuhsc.edu. Within the request, the medical student should specify the faculty member (must have graduate faculty status) that has agreed to serve as a mentor for M.S. research. The GSBS will coordinate with the School of Medicine in reviewing this request.

https://www.ttuhsc.edu/biomedical-sciences/program/md-ms.aspx

The J.D. / M.D. Dual Degree Program
The Doctor of Jurisprudence / Doctor of Medicine Dual Degree Program is administered by Texas Tech University School of Law and Texas Tech University Health Sciences Center, School of Medicine. The JD/MD program is designed specifically for individuals interested in the areas of health law, healthcare policy, bioterrorism, forensics, or biomedical compliance.

Applicants interested in this program must apply separately to the School of Law and the School of Medicine in the same admissions cycle, satisfying the application requirements of each program. It is important to note that entrance into both programs of study require significant advanced preparation and adherence to strict deadlines. It is imperative that interested applicants familiarize themselves with the process of both programs of study. The successful applicant must meet the admission requirements for both programs of study.

Web: https://www.ttuhsc.edu/medicine/admissions/mdjd.aspx

Special Programs (Undergraduate)

Undergraduate to Medical School Initiative (UMSI)
This program is an early acceptance program for academically competitive, Texas high school seniors who will be attending Texas Tech University (TTU) as undergraduate students in the TTU Honors College and desire entrance to the TTUHSC School of Medicine. Students accepted into this program will have the MCAT requirement waived and are guaranteed a position in the medical school class, once the undergraduate program has been completed, provided they have maintained the required GPA and volunteering/medical experiences, and have not violated the code of academic or professional conduct. The undergraduate experience must include a minimum of six long semesters. This program is NOT an accelerated degree program, nor is it a combined degree program, nor is it a joint degree program. The student must first be accepted to Texas Tech University and the Texas Tech University Honors College. If accepted, the prospective student will be notified of his/her qualification for the UMSI program by the undergraduate admissions office. If qualified at that point, the prospective student may be interviewed by TTUHSC School of Medicine in the spring of their senior year in high school. If determined to be qualified, the student may be accepted by the medical school. For more details on the application period, process, and the application itself, please refer to the website:
https://www.ttuhsc.edu/medicine/admissions/undergraduate-to-medical-school-initiative.aspx

Undergraduate Honors Agreements
TTUHSC School of Medicine has early acceptance agreements with the Honors Colleges or Programs of the following schools: Austin College, Texas Tech University, Angelo State University, University of Texas at El Paso, West Texas A&M and Lubbock Christian University. Students that have been accepted in the Honors Colleges at these respective schools and have met all the prescribed requirements, are eligible to apply for early acceptance to medical school. Prospective, qualified applicants are interviewed in the Fall of their Junior year, typically one full year earlier than the traditional applicant. If accepted, the student is guaranteed a seat in the medical school class at TTUHSC School of Medicine and the MCAT requirement is waived. Please note that specific requirements may vary per
Joint Admission Medical Program (JAMP)

TTUHSC School of Medicine participates in the Joint Admission Medical Program. The Joint Admission Medical Program (JAMP) is a special program created by the Texas Legislature to support and encourage highly qualified, economically disadvantaged Texas resident students pursuing a medical education. Funded through the Texas Higher Education Coordinating Board, JAMP is a unique partnership between eleven Texas medical schools and seventy public and private four-year undergraduate institutions. Since 2003, JAMP has been helping Texas students achieve their dreams with guaranteed admission to one of the state's eleven medical schools, financial, and academic support to help them get there, and access to resources that allow them to excel.

JAMP provides:
- Support through undergraduate scholarships and summer stipends
- Placement into JAMP Summer Internship experiences
- Hands-on experience through clinical enrichment opportunities
- Comprehensive, multi-phase MCAT preparation program
- Personal and professional development through dedicated mentoring
- Guaranteed admission to a participating Texas medical school if all criteria are met
- Scholarships to attend medical school

For more information on the JAMP program, please visit: https://www.texasjamp.org/

Medical Student Affairs

Mission Statement
The mission of the Office of Student Affairs on all campuses is to provide academic support and career guidance for medical students, and to do so in a supportive environment that enables students to have a positive experience at TTUHSC School of Medicine. The goal of this office is to assist all medical students with being successful and developing professional skills and personal relationships that will last a lifetime. As student advocates, the Student Affairs staff work to ensure that the rights of students are protected and that all students are treated fairly.
Code of Professional Conduct/Honor System
Upon matriculation into the School of Medicine, each student subscribes to the Medical Student Honor Code and the TTUHSC Code of Professional and Academic Conduct. The purpose of the Code of Professional and Academic Conduct is to emphasize in the medical school environment those qualities of integrity, self-discipline, and professional behavior that are essential to physicians. The TTUHSC Code protects the rights of the student who may be reported for academic dishonesty or for non-professional conduct. If charges are deemed valid, there is a hearing before a student-faculty committee which recommends to the Dean appropriate action. There is an appeal procedure to ensure due process, and the Dean makes a final decision based on the hearings and committee recommendations. A student handbook, which includes the detailed Codes, as well as other relevant policies and procedures, is made available to each student at matriculation. The handbook can also be found on the School of Medicine, Office of Student Affairs website. (http://www.ttuhsc.edu/som/studentaffairs).

Standards for Curricular Completion
The School of Medicine faculty has developed minimum standards for entry into and progression through the medical curriculum. These standards provide guidance to achieve the Doctor of Medicine degree in preparation for licensure as a practicing physician and for postgraduate training. Throughout the medical education process, patient safety is of primary consideration.

Preparation of the Physician
The education of a physician includes the following phases:
1. A preparatory phase with at least 90 hours of credit in an accredited U.S. or Canadian college;
2. A rigorous professional education leading to the M.D. degree;
3. Postgraduate (residency) training; and
4. Lifelong continuing education after completion of residency training.

Unlike most professions, Medicine awards its formal degree midway through the education process, and the awarding of the degree certifies that the student has acquired a broad base of general knowledge and skills requisite for further training in postgraduate work. The process whereby the degree is gained prepares an individual to be a physician rather than a surgeon, psychiatrist, or other specialist. A common body of knowledge, skills, and behaviors thus underlies, and is necessary for, entry into specialized postgraduate training programs.

Medical education requires that the accumulation of scientific knowledge must be accompanied by the simultaneous acquisition of skills and professional attitudes and behaviors. It is through the care of patients that the physician learns the application of scientific knowledge and skills.

It is impossible to consider changes in medical education without considering their impact on patients, who are an integral part of the educational process. Faculties of schools of medicine have immediate responsibility to society to graduate the best possible physician. Admissions standards for medical school must be rigorous and exacting, and admissions must be extended only to those who are qualified to meet the performance standards of the profession.

Development of Medical Curriculum
The medical faculty is charged with devising a curriculum that allows the student to learn the fundamental principles of medicine, to acquire skills of critical judgment based on evidence and experience, and to develop an ability to use principles and skills wisely in solving problems of health and disease. In designing the curriculum, the faculty must introduce current advances in the basic and clinical sciences, including therapy and technology, changes in the understanding of disease, and the effect of social needs and demands on medical care. The faculty should foster in students the ability to learn through self-directed, independent study throughout their professional lives.

Finally, the faculty of each discipline should set the standards of achievement by all students in the study of that discipline. Examination should measure cognitive learning, mastery of basic clinical skills, the ability to use data in realistic problem solving, and respect for the rights and dignity of patients. Institutions must develop a system of assessment which assures that students have acquired and can demonstrate on direct observation the core clinical skills and behaviors needed in subsequent medical training.

Abilities and Skills Requisite for Medical School Completion
In the selection of students and in their progress through the curriculum, medical school faculty is guided by standards set by the Liaison Committee on Medical Education (LCME). The faculty place strong emphasis on the academic achievements of applicants, including performance in the sciences relevant to medicine. This includes evidence of satisfactory scholastic achievement as indicated by grade point averages (GPA) and scores on the Medical College Admissions Test (MCAT). Breadth of education and life experiences are deemed important in the selection process.
These abilities include measurement, calculation, reasoning, critical thinking, judgment, and decision-making. The faculty is equally cognizant of its responsibilities to patients who will be a part of the educational process and to future patients who will entrust their welfare and lives to medical school graduates. They therefore consider carefully the personal and emotional characteristics, motivation, industry, maturity, resourcefulness, and personal health appropriate to the effective physician.

Because the M.D. degree signifies that the holder is a physician prepared for entry into the practice of medicine within postgraduate training programs, it follows that graduates must acquire a foundation of knowledge in the basic and in the clinical sciences that will permit the pursuit of any of the several careers that medicine offers.

Candidates for the M.D. degree must have somatic sensation and the functional use of the senses of vision and hearing. Candidates’ diagnostic skills will also be lessened without the functional use of the senses of equilibrium, smell, and taste. Additionally, they must have sufficient exteroceptive sense (touch, pain, and temperature), sufficient proprioceptive senses (position, pressure, movement, stereognosis and vibratory) and sufficient motor function to permit them to carry out the activities described in the sections which follow. They must be able to consistently, quickly, and accurately integrate all information received by whatever sense(s) is employed, and they must have the intellectual ability to learn, integrate, analyze and synthesize data.

A candidate for the M.D. degree must have abilities and skills in six essential areas: (1) observation, (2) communication, (3) motor, (4) conceptual, integrative and quantitative, (5) behavioral and social, and (6) ethical. Technological compensation can be made for disabilities in certain of these areas; but a candidate should be able to perform in a reasonably independent manner. The use of a trained intermediary to observe or interpret information or to perform procedures is deemed to compromise the essential function of the physician and may jeopardize the safety of the patient. The six areas of abilities/skills are detailed as follows:

1. **Observation:** The candidate must be able to observe demonstrations and experiments in the basic sciences. A candidate must be able to observe a patient accurately at a distance and close at hand. Observation necessitates the functional use of the sense of vision and somatic sensation. It is enhanced by the functional use of the sense of smell.

2. **Communication:** A candidate should be able to speak; to hear; and to observe patients in order to elicit information, to describe changes in mood, activity and posture; and to perceive non-verbal communications. A candidate must be able to communicate effectively with patients. Communication includes not only speech but reading and writing. The candidate must be able to communicate effectively and efficiently in oral and written form with patients and with all members of the health care team.

3. **Motor:** Candidates should have sufficient motor functions to elicit information from patients by palpation, auscultation, percussion, and other diagnostic maneuvers. A candidate should be able to execute motor movements reasonably required to provide general care and emergency treatment to patients. Examples of emergency treatment reasonably required of physicians are cardiopulmonary resuscitation, administration of intravenous medication, application of pressure to stop bleeding, opening of obstructed airways, suturing and emergency treatment to patients. Examples of emergency treatment reasonably required of physicians are cardiopulmonary resuscitation, administration of intravenous medication, application of pressure to stop bleeding, opening of obstructed airways, suturing and emergency treatment to patients.

4. **Intellectual-Conceptual, Integrative and Quantitative Abilities:** These abilities include measurement, calculation, reasoning, analysis, and synthesis. Problem solving and the clinical skills demanded of physicians require all of these intellectual abilities. In addition, the candidate should be able to comprehend three-dimensional relationships and to understand the spatial relationships of structures.

5. **Behavioral and Social Attributes:** A candidate must possess the emotional health required for full utilization of his/her intellectual abilities; the exercise of good judgment; the prompt completion of all responsibilities attendant to the diagnosis and care of patients; and the development of mature, sensitive, and effective relationships with patients. Candidates must be able to tolerate physically taxing workloads and to function effectively under stress. They must be able to adapt to changing environments, to display flexibility and to learn to function in the face of uncertainties and ambiguities inherent in the clinical problems of many patients. Compassion, integrity, concern for others, interpersonal skills, interest and motivation are all personal qualities that should be assessed during the admissions and education process.

6. **Ethical Standards:** A candidate must demonstrate professional demeanor and behavior, and must perform in an ethical manner in all dealings with peers, faculty, staff and patients.

**Requesting Accommodations**

Without compromising the standards required by the School or the fundamental integrity of its curriculum, the School recognizes that persons with disabilities, as that term is defined in the Americans with Disabilities Act, may fulfill the standards with reasonable accommodation. The School of Medicine is committed to developing innovative and creative ways of opening its curriculum to competitive and qualified candidates with disabilities. Requests for accommodation under the Standards for Curricular Completion will...
be considered on an individual basis and reasonable accommodation will be arranged if appropriate. The use of a trained intermediary to observe or interpret information is considered to compromise the essential function of the physician.

When an applicant comes for an interview at the School of Medicine, a copy of the detailed Standards for Curricular Completion will be included in the Orientation Packet. Questions about the Standards are welcomed and interviewees will be informed that they must be qualified to meet all of the standards, with or without accommodation.

If a student is offered and accepts an admissions offer from the School of Medicine, the student must then sign a form acknowledging that he/she has read and understands that the Standards for Curricular Completion must be met with or without accommodation. A request for accommodation along with supporting documentation about the disability from an appropriate specialist and the proposed accommodation(s) must be presented in writing to the TTUHSC ADA Compliance Officer in the HSC Office of Student Services. Details about the process for requesting accommodation are available through the TTUHSC Office of Student Services website (www.ttuhsc.edu/studentservices/ada/default.aspx).

Copies of the request and documentation will then be forwarded to the School of Medicine Office of Student Affairs. The TTUHSC ADA Compliance Officer will submit the results of their review, along with specific recommendations if the request for accommodation is granted, to the School of Medicine Office of Student Affairs. The School may also seek independent review from a specialist of its choice. The decision on whether or not an accommodation request will be granted is made by a committee composed of the Associate Dean for Academic Affairs, the Associate Dean for Student Affairs, the Student Affairs Committee, and (as needed) ad hoc faculty who are knowledgeable regarding the area of disability. Such decisions are subject to review and approval by the Dean. If reasonable accommodation is feasible, effort will be made to provide the accommodation as classes begin. If the request for accommodation is denied, the student will be notified in writing.

The Faculty, through the Student Promotion and Professional Conduct Committee, has determined that students will be expected to complete the curriculum within four years from the time of initial matriculation and take all designated courses as appropriate for that stage of the curriculum. Exceptions to the requirement that students take all designated courses as appropriate for that stage of the curriculum may be sought and processed as other requests for accommodation, as noted above. Such a request will be based on 1) a specific disability certified by a qualified professional and accompanied by a specific recommendation for accommodation (i.e., a decompressed curriculum based on stated disability) and 2) a written request from the matriculant for such an accommodation based on stated disability. As noted above, while students will be expected to complete the curriculum in four years, an accommodation which includes a decompressed curriculum will not invalidate the requirement that a student must complete all curricular requirements in no more than six years from the time of initial matriculation (3 years for completion of the MS 1 and MS 2 years, and 3 years for the MS 3 and MS 4 years).

In the area of learning disabilities (see definitions on the TTUHSC Office of Student Services website), the student should note that he/she will have to petition the National Board of Medical Examiners for any accommodation on the United States Medical Licensing Examinations (Step 1, Step 2 Clinical Knowledge, Step 2 Clinical Skills, and Step 3) and that this process is in addition to and separate from any request for accommodation by the Texas Tech University Health Sciences Center School of Medicine.

Health Insurance & Immunizations
The Association of American Medical Colleges states that all students should be immunized against a number of infectious diseases for their own safety as well as the safety of others. All matriculating TTUHSC School of Medicine students must be compliant with the school's immunization requirements in order to register for classes.

Health Insurance Requirements
All students at TTUHSC School of Medicine are required to carry personal health insurance at all times while enrolled in the curriculum. The school’s clinical affiliates also require that students carry health insurance in order to participate in clinical experiences.

TTUHSC Student Services has information about health insurance that is available to students. However, many other insurance companies also offer health plans. Students should compare health insurance plans in order to select the plan that is best suited to their personal situation.

Students are required to provide proof of personal health insurance coverage each year during medical school. Clinical affiliates as well as other medical schools (for extramural learning experiences) reserve the right to require proof of coverage on demand and to exclude individuals without current insurance coverage from rotations.

Immunization Requirements
In order to protect the health of our medical students and the health of the patients with whom they come in contact, the School of Medicine requires all entering students to provide documentation of several immunizations as well as the results of serological titers to
determine whether or not they are actually immune to certain diseases. Protective immunity provided by some immunizations declines over time, and some individuals do not ever produce protective antibodies after receiving immunizations. Serologic titers are needed to determine immune status and are performed on a blood sample drawn from the arm.

Students are not allowed to participate in any classes involving patient contact until all required immunization documentation has been received by the TTUHSC Office of Institutional Health. All students entering Texas Tech University Health Sciences Center School of Medicine must provide proof of immunity documentation and/or the results of required titers.

- Tetanus/diphtheria booster within 10 years of matriculation
- Tdap (tetanus, diphtheria and pertussis), one time dose as an adult (starting year 2005)
- Measles-Mumps-Rubella (MMR), protective antibody titer
- Hepatitis B surface antibody, protective antibody titer
- 2-step Tuberculin skin test (PPD) minimum of 7 days apart (if you haven’t had TB test within the past 12 months) OR documented physician diagnosis of disease OR chest X-ray in the past year following prior positive skin test
- Varicella (Chicken Pox), protective antibody titer
- Meningococcal (MCV), within the last 5 years – required for adults 22 years of age and younger
- Influenza vaccine

**Academic Support Services**

Students receive a variety of support services above and beyond the formal academic program. Most importantly, students have ready access to faculty for assistance and are actively encouraged to utilize this valuable resource. In addition, the School of Medicine Office of Student Affairs offers individual assistance in identifying and improving deficiencies in studying, test taking, and time management skills. Students are referred for outside counseling as appropriate. Personnel in the SOM Office of Student Affairs are trained to provide individual academic counseling. Peer tutoring services are also available to assist students in specific curricular content areas.

Sometimes personal problems can have a deleterious effect on academic performance. Students can self-refer to the Health Sciences Center Program of Assistance for Students for free counseling services.

**Grading**

All blocks in Years 1 and 2 are graded as Pass, or Fail. Clerkships in Year 3 are graded as Honors, High Pass, Pass and Fail. Electives in Year 4 are graded Pass, or Fail.

Final grades in Years 1 and 2 are derived from a variety of assessment tools, including written and practical exams, small group evaluations, and NBME Examinations in selected blocks or courses. Students must also display appropriate professional behavior in order to complete courses in the first 2 years.

Third year clerkship grades are primarily determined by student performance on three major graded components: clinical evaluations by attending faculty and residents, NBME Clinical Subject Exams and an Observed Structured Clinical Examination. Students must also display appropriate professional behavior throughout the clerkships. Fourth year grades are derived from evaluations by attending faculty and residents with departmental exams and presentations on some electives.

**Academic Progress**

The faculty of the School of Medicine has the responsibility for recommending students for promotion and graduation. This responsibility is administered through the Student Promotions and Professional Conduct Committee (SPPCC) that represents the faculty at large. The members of the SPPCC are appointed by the Executive Committee of the Faculty Council and are charged with the responsibility to review and evaluate the academic and behavioral progress of each medical student enrolled at TTUHSC School of Medicine.

The SPPCC determines the conditions for promotion, reinstatement, or dismissal for each student in accordance with the published policies and procedures. Every attempt will be made to apply principles of fairness and due process when considering actions of the faculty or administration related to student performance. In general, students who receive a final grade of Fail will meet the SPPCC to discuss their academic performance and possible actions by the Committee. Possible actions include remediation, repetition of an academic year, or dismissal.

**United States Medical Licensing Examination (USMLE)**

Students are required to take the USMLE Step 1 exam prior to beginning Year 3 of the curriculum and must achieve a passing score to continue beyond the first clerkship in the third year. Students who do not achieve a passing score on the first attempt will not continue with clinical clerkships until they do so. Students must also pass the USMLE Step 2 Clinical Knowledge exam and the Longitudinal Clinical Skills exam as requirements for graduation from the medical school curriculum.
Graduation
Students planning to graduate MUST complete the TTUHSC Intent to Graduate form. Students should create a "Diploma" address in WebRaider so their diploma will be mailed to the proper address. The diploma address will only be used if the diploma is not picked up at Commencement.
Office of Academic Affairs
Simon Williams, Ph.D., Senior Associate Dean for Academic Affairs, Professor, Medical Curriculum
Bianca Cervantez, Administrative Assistant

Curriculum Division
Michaela Jansen, Ph.D., Assistant Dean for the Pre-Clerkship Curriculum, Professor, Medical Curriculum
Ebtesam Islam, MD, PhD, Associate Dean for Clinical Education, Associate Professor, Internal Medicine
Samuel Campbell, MD, Assistant Dean for the Clinical Science Curriculum, Professor, Surgery
Lara Johnson, MHS, MD, Director for Year 4 Curriculum
Jo Ann Armstrong, Associate Managing Director
Candace Brown, Unit Manager for Year 1 and Year 2 Curriculum
Joangel Sanchez, Coordinator for Year 1 and Year 2 Curriculum
Erin Vaca, Coordinator for Year 1 and Year 2 Elective Curriculum
Amanda Jeter, Coordinator for P3/DOCS1 and P3/DOCS2 Curriculum
Meredith Trevino, Section Manager for Year 3 Curriculum
Kelley Moss, Unit Manager for Year 4 Curriculum

Amarillo Campus
Kristin Stutz, MS, Assistant Regional Academic Dean

Permian Basin Campus
Martin Ortega, MD, Assistant Dean for Medical Education, Assistant Professor, Family Medicine
JP Garcia, Assistant Academic Dean
Jasmine Knorr, Senior Director
Mina Machuca, Program Manager
Doctor of Medicine Program

Institutional Educational Vision, Goals, and Objectives

**Vision:** Graduates of the TTUHSC-SOM will be compassionate, competent, and knowledgeable health professionals who work diligently to improve the health of the public.

**Goal:** The Texas Tech University Health Sciences Center School of Medicine will graduate physicians who deliver patient-centered care as members of an interdisciplinary team, emphasizing evidence-based practice, quality improvement approaches, and informatics.

**Objectives:** To accomplish our goal, the Texas Tech University Health Sciences Center School of Medicine has identified key objectives for our program that address the knowledge, skills, behaviors, and attitudes needed for students to acquire the degree of Doctor of Medicine. These objectives are designed to ensure that students acquire the six core competencies described by the Accreditation Council for Graduate Medical Education: patient care, medical knowledge, practice-based learning and improvement, interpersonal and communication skills, professionalism, and systems-based practice. Each block, clerkship and rotation sets forth specific learning objectives and their outcome measurements based on these key educational objectives. The School of Medicine will continue to review these objectives and revise as needed to ensure that the vision and goals are met.
Upon completion of all required courses and clinical educational experiences the student will be able to:

C. **Patient Care**: *(That is compassionate, appropriate, and effective for the treatment of health problems and the promotion of health)*

1. Participate in competent and humane medical care of individuals, families and the larger society based on the scientific and clinical principles of health and its promotion, disease and its prevention and management, and psychosocial factors influencing the well-being of patients.
2. Assess the clinical status of patients to include obtaining a patient’s history, performing a comprehensive physical examination, and assessing and describing treatment plans to address the medical and emotional needs of the patient.
3. Evaluate the clinical status of patients through proficiency in clinical reasoning, including identification of clinical problems using scientific methods, data collection, hypothesis formulation, and the retrieval, management, and appropriate use of biomedical information for decision-making.

K. **Medical Knowledge**: *(Of established and evolving biomedical, clinical, and behavioral sciences and their application to patient care)*

1. Describe the application of the scientific method for solving problems in the basic and clinical sciences.
2. Complete both comprehensive and problem-specific physical examinations appropriate to the concerns, symptoms, and history of the patient.
3. Integrate the patient interview and physical examination findings with medical knowledge to identify the clinical problems of patients, formulate differential diagnoses, apply the scientific method and develop plans for diagnostic investigation, treatment, and management.
4. Describe the application of laboratory tests and diagnostic procedures and interpret their results.
5. Analyze clinical problems and formulate differential diagnoses, diagnostic investigations and clinical treatment and management plans by applying data from the clinical interview and clinical examination.
6. Participate in the selection and performance of basic diagnostic and therapeutic procedures.

I. **Practice-Based Learning and Improvement**: *(The investigation and evaluation of patient care practices, appraisal and assimilation of scientific evidence and improvement of patient care practices)*

1. Apply evidence-based care to patients and use skilled clinical reasoning and the current state of medical art and science.
2. Use analytical tools for data collection, quantitative analysis, critical reading and investigation, and apply these data to the clinical care of patients.
3. Use self-directed learning and information technology to acquire information from the basic and clinical sciences needed for patient care.
4. Demonstrate commitment to life-long learning, including self-directed study of basic and clinical science, critical assessment of the medical literature, and the use of evidence-based medicine.

L. **Interpersonal and Communication Skills**: *(The ability to effectively exchange information and collaborate with patients, their families, and other health professionals)*

1. Communicate effectively, both verbally and non-verbally, with patients and their families, colleagues, and other health care professionals about clinical assessments and findings, diagnostic testing, therapeutic interventions, prognosis, and disease processes.
2. Demonstrate an understanding of the social nature of health care and the need for respect for patients, other health care professionals, and administrative members of the health care systems.

P. **Professionalism**: *(The behaviors of a competent, compassionate, and ethical physician)*

1. Demonstrate professional integrity and exemplary behavior, including compassion, truthfulness, ethical reasoning, and altruism.
2. Demonstrate sensitivity to the diverse biopsychosocial, cultural, and spiritual needs of patients and communicate clearly, respectfully, and compassionately with patients, their families and other health care professionals.
3. Participate in patient care that is compassionate and empathic, including pain management, substance abuse, mental health disorders, or terminal illness.
4. Demonstrate dedication to the highest ethical standards governing physician-patient relationships, including privacy, confidentiality, and the fiduciary role of the physician and health care systems.

S. **System-Based Practice**: *(The larger context and system of healthcare that includes effective use of resources in the system to provide optimum health care)*

1. Describe the organization of the health care delivery system and the professional, economic, legal, and ethical expectations of physicians.
2. Demonstrate the application of the principles of behavioral and social sciences as applied to family systems and their effect on patient health.
3. Employ health care within an interdiscipliary team that is safe, effective, patient-centered,timely, efficient, and equitable.
Undergraduate Medical Education
Texas Tech University Health Sciences Center School of Medicine is committed to excellence in the medical education of generalist physicians in preparation for training in any clinical specialty. In the Fall of 2021, the School will launch a new curriculum beginning with the Class of 2025 that emphasizes:

- Continuous integration of basic science and clinical medicine in all four years, with early introduction of clinical experiences starting with the first month of medical school
- Self-directed student learning with varied teaching formats directed to achieving the important competencies of our Vision, Goals, and Objectives listed above, and
- Active management of curricular content both within and across all four years

The School of Medicine has responded to the Association of American Medical Colleges and medical education innovations nationwide to realign curricula so graduating students meet the best practice standards of patient-centered scientific care. The new curriculum at the School of Medicine emphasizes competency-based education, focusing on the skills and compassion that distinguish excellence in patient care in our profession. Dedicated teaching faculty have responded fully to this unparalleled opportunity to reshape the curriculum so that students are the best-prepared doctors and the faculty members are the best educators. Our curriculum trains students to manage and use the constantly changing best evidence for practice, and to apply this evidence in humane and sensitive manner.

To ensure distinction in medical education, Dean Steven Berk fully supports the offices charged with the SOM educational mission: the Office of Academic Affairs, the Office of Student Affairs, the Office of Curriculum, and the Office of Faculty Affairs and Faculty Development. These offices work closely on this common mission to ensure continual improvement of learning and teaching. In conjunction with the Curriculum and Educational Policy Committee, the faculty, and student body that oversees adherence of the curriculum to national and school standards, the Offices have made student assessment and feedback the centerpiece of curriculum redesign.

The curriculum is continually reviewed and modified to ensure the personal and professional growth of our future physicians. To promote balance between academics and lifestyle in Phase 1 (previously Years 1 and 2), the SOM has limited contact time to 20 or fewer hours per week. Opportunities for interactive learning through small group tutorials, labs, problem-based learning, team-learning, and web-based instruction have also been expanded.

The management of the curriculum has been formally endorsed by the Liaison Committee on Medical Education. The Liaison Committee on Medical Education represents the Association of American Medical Colleges and the American Medical Association as the national accreditation body for medical schools. The Texas Tech University Health Sciences Center School of Medicine received a full accreditation in March 2017.

Educational Tracks and Dual Degrees at the School of Medicine
Beginning with the class that matriculated in Fall 2010, students have been able to choose between two educational tracks within the School of Medicine, a standard four-year program and a three-year accelerated program called the Family Medicine Accelerated Track (FMAT). The School of Medicine also offers several joint degrees in collaboration with other schools at Texas Tech University Health Sciences Center or Texas Tech University and a MD with Research Honors degree.
Dual Degree Programs

**MD/MBA**
The MD/MBA program is a four-year dual degree program offered by the School of Medicine and the Rawls School of Business at Texas Tech University. Students complete the MBA component of the degree during Phase 1 of the medical school curriculum and can complete Phases 2 and 3 of the MD curriculum on any TTUHSC SoM campus.

**MD/MS**

The School of Medicine and the Graduate School of Biomedical Sciences offer the MD/MS program. It is designed for students who wish to add research experience to their portfolio, and requires the performance of one year of research in collaboration with faculty from the Graduate School of Biomedical Sciences. The research year is usually performed after Phase 2 of the MD curriculum.

**MD/JD**

The School of Medicine and the School of Law at TTU offers the JD/MD dual degree program. Students complete 78 hours of coursework in the School of Law over the course of two years after Phase 2 of the MD curriculum. An additional 12 hours of coursework from the MD curriculum completes the 90-credit hour requirement for the JD degree.
MD/MPH
The MD/MPH program is a four-year dual degree program offered by the School of Medicine and the Graduate School of Biomedical Sciences. Students complete the MPH component of the degree at the same time as they are completing the MD degree, although most MPH courses are scheduled at times that do not conflict with MD courses. Students in this program can complete Phases 2 and 3 of the MD curriculum on any TTUHSC SoM campus.

MD&E
The School of Medicine and the Whitacre College of Engineering at TTU offer the MD/MEng dual degree. It is designed for students seeking to combine the problem solving and innovative approaches of Engineering to medical practice and invention. Students in this program will complete Engineering courses between SOM semesters and will complete a research project with mentors from Medicine and Engineering programs primarily in their first two years in the program. Additional courses may be taken during Phase 3 if needed and thesis and non-thesis options will be available.

TRIAL = Transition to Residency: Individual Asynchronous Learning
Family Medicine Accelerated Track (FMAT)

For those students interested in pursuing a career in Family Medicine, TTUHSC School of Medicine offers an innovative curriculum that allows for completion of the M.D. degree in 3 years. The FMAT Program is 6 years total with the students proceeding directly into one of TTUHSC’s Family Medicine Residency Programs after completion of the 3 year M.D. curriculum. The FMAT program will offer students a seamless transition between their pre-doctoral and residency training settings and curricula as they spend two years in Lubbock, followed by at least 4 years on the campus (Amarillo, Lubbock, or Permian Basin) where they will complete both the final year of medical school and three years of family medicine residency training. Students will be chosen from each TTUHSC School of Medicine first year class and will be notified of their selection early in the second semester of first year. Preference will be given to students with demonstrated interest in Primary Care/Family Medicine, academic performance (including grades from fall semester of year 1 placing the student in the top 50% of the class), as well as interviews with members of the FMAT faculty.

FMAT Program for TTUHSC School of Medicine

TTUHSC School of Medicine received approval in Spring 2010 for the establishment of a new accelerated educational program named the Family Medicine Accelerated Track (FMAT). This accelerated educational program was developed in recognition of the need to train more physicians who will practice in the major primary care field of Family Medicine. Up to 10 students per year will participate in this program. The major modifications in this program include additional coursework in the summer during Phase 1, a longitudinal Family Medicine Clerkship in their second year and an advanced Family Medicine experience at the end of Phase 2 that covers material normally presented in the advanced clinical training component (Phase 3) of the standard curriculum.

School of Medicine 2022 - 2023
## Family Medicine Accelerated Track Course Descriptions

**FMAT 6201 Family Medicine Accelerated Track 1 (The Science of Family Medicine)** This 8-week concentrated course will be taken during the summer between Year 1 and Year 2 under the supervision of Family Medicine faculty. This course will prepare students to begin the Longitudinal Family Medicine Clerkship during Year 2. Students in the regular curriculum take four integrated blocks in Year 2 that cover areas of neurobiology and pathophysiology of human disease. The FMAT 1 course will cover topics from these courses that are particularly important for students during the Family Medicine Clerkship.

**FMAT 6202 Family Medicine Accelerated Track 2 (Longitudinal Family Medicine Clerkship)** This will be a longitudinal Family Medicine Clerkship that introduces students to the care of the undifferentiated ambulatory patient. Emphasis will be on clinical problem-solving, management of common problems, and prevention and health promotion. Learning objectives from DOCS-2 and the Geriatrics rotation will also be incorporated.

**FMAT 7201 Family Medicine Inpatient and Critical Care Experience** This 8-Week course takes place during May and June of the MS3 year. Experiences include ICU and critical care and Family Medicine inpatient service, with time available to take the Step2 CK exam. Students will participate in graduation activities in May but will not complete the course until the end of June, when they will participate in orientation for their residency program.
4 Year Doctor of Medicine Program

Most students will follow a standard four-year program with Phase 1 focused on the acquisition of knowledge of the scientific basis of medicine allied to an introduction to clinical medicine and Phase 2 and 3 provided instruction and experiences in a variety of areas of clinical medicine.

Phase 1 Courses

The first year is divided into four consecutive interdisciplinary blocks named Anatomy, Histology, and Embryology, General Principles, Organ Systems 1 and Organ Systems 2, a combined clinical skills/introduction to doctoring course named P3/DOCS 1 and an introductory interprofessional education course taken during orientation to the first year. P3/DOCS 1 consists of two components, a longitudinal clinical skills training course (Development of Clinical Skills (DOCS)) and three one-week inter-block sessions that cover topics such as medical ethics, professionalism and cultural competence (Patients, Physicians and Populations, P3). The P3 course also includes small group sessions within each of the four consecutive blocks that apply the concepts introduced in the P3 course to the content of each of the blocks. Students must pass all blocks in order to complete the first phase.

Phase 1 Electives

Elective courses are available for students in Years 1 and/or 2 to expand their experiences and to permit them to explore areas outside standard curricular courses. There are no specific requirements for taking electives in Years 1 and 2 and students should only enroll in these electives if they are sure that they will not interfere with their ability to successfully complete the medical school curriculum. All electives are zero credit courses and appear on student transcripts if they are successfully completed. It is possible that certain electives will not be offered each year and announcements will be sent to students as these courses become available. Electives generally have caps to student numbers and methods for selection of participants will be distributed at the time of announcement.

Phase 2 Courses

In Phase 2 students move to the clinical arena on one of our four campuses: Lubbock, Amarillo, Covenant or Permian Basin. Each student focuses on one clinical discipline at a time, and rotates through six eight-week clerkships in Internal Medicine, Surgery, Family Medicine, Obstetrics/Gynecology, Pediatrics, and Psychiatry. Each student also participates in the Integration Seminar, a student-led Grand Rounds that explores the fundamental scientific basis of selected clinical cases. Our School actively promotes and monitors the quality and comparability of the educational experiences on each of the campuses and maintains equivalent methods of evaluation. Student performance is assessed at the end of each clerkship using three independent and complementary assessment components, an Objective Structured Clinical Examination (OSCE), clinical performance assessments completed by faculty and residents and a subject-specific examination. Thus, student performance can be compared with national norms as well as with each other on the three campuses. The values are well correlated and thus, the second phase is equivalent to a single campus experience. We also closely monitor the number and diversity of patients to ensure the necessary breadth of exposure to clinically challenging patients.

Phase 3 Courses

Each regional campus offers both required and elective rotations. Student complete one required course, a longitudinal course designed to assist students in preparing for residency (TRIAL). Students also complete three selective experiences, each of which can be performed in one of several clinical departments based on specific student interests. The selects consist of a one-month Sub-Internship chosen from Family Medicine, Internal Medicine, Obstetrics & Gynecology, Pediatrics or Surgery; a two-week Critical Care selective chosen from Internal Medicine, Surgery, or Pediatrics; and a 2-week selective in an ambulatory setting chosen from Family Medicine, Internal Medicine, Obstetrics and Gynecology, Pediatrics and Psychiatry. The remainder of the fourth-year curriculum consists of five months of broadly-based elective experiences. Electives may be completed on any TTUHSC campus or at LCME-accredited institutions in the US. A faculty committee reviews each student’s fourth year program to ensure they receive a complete and appropriate educational experience. It should be noted that some electives may not be available in every period on each campus and students should check with the department of the Office of Student Affairs on their campus to ensure that their chosen elective is available at a time that suits their schedule.

4 Year Doctor of Medicine Program

Most students will follow a standard four-year program with Phase 1 focused on the acquisition of knowledge of the scientific basis of medicine allied to an introduction to clinical medicine and Phase 2 and 3 provided instruction and experiences in a variety of areas of clinical medicine.

**Note:** Basic Medical Spanish must be completed before beginning Phase 2.

**Note:** Clerkships can be taken in any order. Clerkships: Family Medicine, Internal Medicine, OB/GYN, Pediatrics, Psychiatry and Surgery. Electives can be taken 2 weeks after completion of Clerkships. Rotations (Sub-internship, Ambulatory, Critical Care and Electives) and available time can be taken in any order.

---

School of Medicine 2022 - 2023

Page 45 / 60
Dermatology Ambulatory Rotation This elective is designed to expose the student to a wide variety of dermatologic conditions with the expectation that at the conclusion of the experience common conditions and disorders will be recognizable. The student should be able to better appreciate patterns and morphology of mucocutaneous conditions so they can generate a working differential diagnosis on how to manage the patient. This includes management and may include further testing, treatment, and/or referral to a specialist. The student will participate in clinics (few infrequent consultations) observing a variety of dermatologic disorders and dermatologic procedures in both the adult and pediatric patient population.

FMFM 8104 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Family Medicine Ambulatory Rotation This elective is set in an ambulatory clinic and emphasizes the breadth of family medicine. The student will have an opportunity to care for a wide variety of simple and complicated problems, practice patient counseling and education skills, and be able to see some patients through a brief illness with follow-up care. Family-oriented health care, family dynamics, preventive care and the team approach to health care are emphasized.

FMFM 8105 (Odessa HSC) Geriatrics Ambulatory Rotation This rotation will allow students to learn about the principles of aging and become proficient in the management of certain Geriatrics syndromes.

MINT 8201 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Internal Medicine Ambulatory Rotation This rotation in internal medicine’s multispecialty clinic prepares the students in ambulatory medicine where they are exposed to outpatients in various disciplines of medicine. The aim is to make students more comfortable and confident in aspects of history and physical focused and time-limited interaction in an outpatient setting, which is where most will practice in the future. Highly recommended for students pursuing career in internal or family medicine.

MNU 8101 (Lubbock HSC, Odessa HSC) Neurology Ambulatory Rotation This rotation exposes the student to principles of diagnosis and management of common neurologic conditions. The student learns skills in conducting neurologic exams, identifying signs and symptoms of neurologic disorders, and integrating signs and symptoms into syndromes. Students learn about basic neurologic disorders and neurologic complications of systemic conditions.

MOBG 8102 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) OB/GYN Ambulatory Rotation This two week selective is a compilation of the spectrum of patients seen in the ambulatory obst/gyn clinic (gynecology, antenatal care, high risk obstetrics, urogynecologic, and infertility). Hands on opportunities may include preparing for and performing the following office gynecologic procedures: cervical cytology and cultures, colposcopy, endocervical curettage, cervical, and endometrial biopsy. The student will be expected to present objective findings to the supervising physician, counsel patients concerning various contraceptive options, complications, and contraindications, and review the evaluation and management of the abnormal cervical cytology screen. The student will also be expected to formulate treatment plans and work on proper communication within interprofessional teams in order to efficiently and effectively coordinate ambulatory patient care.

MOPH 8101 (Lubbock HSC, Odessa HSC) Ophthalmology Ambulatory Rotation This rotation provides exposure to diagnosis and treatment of medical and surgical eye diseases. The student rotates through a complete range of subspecialty clinics and also will be provided with the opportunity to observe and participate in ophthalmic procedures and surgery. This will allow them to become familiar with state of the art ophthalmic medical, laser and microscopic surgery treatments. Departmental seminars and lectures are open to interested students. Opportunity to observe community ophthalmologists is also possible. Emphasis will be directed toward developing competency in the basic eye examination.

MPED 8102 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Pediatric Ambulatory Rotation The purpose of this ambulatory rotation is to familiarize the student with pediatric patients and parent education, acute intervention in common childhood diseases and follow-up visits, and evaluation of patients in an outpatient consultation service.

MPSY 8103 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Adult Psychiatry Ambulatory Rotation This rotation is designed to give students experience in evaluation, diagnosis, and management of patients with psychiatric illnesses. Students will engage in diagnostic assessment, formulation of treatment plan and provision of psychotherapy and/or psychopharmacologic treatment. The student is expected to interact with patients and participate in discussions of treatment options.

MPSY 8104 (Lubbock HSC) Child/Adolescent Psychiatry Ambulatory Rotation This rotation will familiarize students with common psychiatric diagnoses and treatments for children and adolescents. Students will observe and participate in the evaluation and treatment of children/adolescents in outpatient and consults services. Particular emphasis is given to patients presenting skills in the areas of clinical judgment and decision-making. Students are encouraged to take increasing amounts of patient care responsibilities while under close supervision. The student will attend family meetings and other relevant meetings. The student is expected to lead at least 4 comprehensive child/adolescent psychiatric interviews, assess at least 2 child/adolescent inpatient consultations and present at least 1 case to the attending using a biospsychosocial formulation model for treatment plan.

Depending on length of rotation the above will be modified.

MINT 8101 (Amarillo HSC, Covenant Branch HSC, Odessa HSC) MICU/CCU Elective This selective/elective utilizes patients admitted to the intensive care units within various teaching hospitals. Emphasis will be directed toward developing competency in the basic ICU examination. Students are encouraged to take increasing amounts of patient care responsibilities while under close supervision. The student will attend family meetings and other relevant meetings. The student is expected to lead at least 4 comprehensive child/adolescent psychiatric interviews, assess at least 2 child/adolescent inpatient consultations and present at least 1 case to the attending using a biospsychosocial formulation model for treatment plan.

MINT 8202 (Lubbock HSC) Cardiac Intensive Care Unit Rotation The student will gain experience in managing common medical emergencies, including cardiopulmonary arrest, hyperkalemia, acute myocardial infarction, cardiogenic shock, and congestive heart failure. The student will also become familiar with the various types of mechanical ventilators, oxygen delivery systems, and methods of delivering inhaled medication.

MINT 8203 (Lubbock HSC) Medical Intensive Care Unit Rotation The student will gain experience in managing common medical emergencies, including cardiopulmonary arrest, drug overdose, hypertension, acute myocardial infarction, cardiogenic shock, congestive heart failure, renal failure, and diabetic ketoacidosis. The student is also expected to become proficient in the evaluation and management of common chest problems. These include asthma, chronic obstructive pulmonary disease, pleural effusions, peri-operative complications, pneumonia, atelectasis, respiratory failure, pulmonary function tests, and chest x-rays. The student will also become familiar with the various types of mechanical ventilators, oxygen delivery systems, and methods of delivering inhaled medication.

MPED 8202 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC) Pediatric Intensive Care Elective The student will be exposed to all pediatric critical care: Sepsis, Trauma, ARDS, and all potentially or life-threatening illnesses. The student will act as an acting intern with direct patient care responsibilities. There will be no outpatient, ward, or clinic responsibilities except Continuity Clinic. The student will make daily rounds with the attending physicians. The student will have an opportunity to perform procedures such as spinal taps, A-line, central lines, chest tubes, intubation, and catheter placement. Emphasis will be placed on physiology, recognition of common acute life-threatening injuries-illnesses, and ventilator management.

MPED 8203 (Lubbock HSC) Neonatal Intensive Care This selective/elective is designed to familiarize the student with neonatal-perinatal physiology, high-risk factors associated with neonatal admissions, and history and physical examination diagnosis and management of common neonatal problems, dealing with acute neonatal emergencies, and communicating with parents of high-risk neonates. The students’ primary responsibility will be the total management and supervision of assigned patients. Students will also be expected to participate in daily rounds, night call, weekly discussion group on neonatal-perinatal disease and presentation of a review on a selected aspect of neonatal-perinatal medicine towards the end of the rotation.

MSUR 8205 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Surgical Intensive Care Unit This elective exposes the fourth year medical student to the most critically ill patients from surgery, anesthesia and other departments, led by an attending specialized in intensive care medicine. Medical student will be assigned patients appropriate for their level of training and under direct supervision of the attending, will learn to thoroughly evaluate their overall condition, develop a management plan, and get experience to round twice a day with the attending and the team, attend daily multidisciplinary conference and take in house call once a week including one weekend day. The student is expected to participate in educational activities including ICU lectures, M&M and Ground Rounds within the Department of Surgery.

MSUR 8207 (Lubbock HSC) Burn Intensive Care Rotation During this rotation, the fourth year medical student will become intimately involved with the management and care of burn patients ranging from the most severe injury with life threatening burns to the less severe, both adult and pediatric patients.

MSUR 8208 (Lubbock HSC) Neurological Intensive Care Unit Elective This rotation exposes the fourth-year medical student to the most critically ill patients with neurological emergencies. Emphasis will be placed on acute care, assessment, initial stabilization, management, and follow-up of neurological patients. The student will also be exposed to the care of patients who have been evaluated and treated for a variety of neurological emergencies and brain lesions. The student will be assigned patients appropriate for their level of training. The students will learn to thoroughly evaluate the overall condition of the patient and develop and implement a management plan. The students will become familiar with common neurological conditions including vascular pathology and hemorrhage, closed and open head trauma, and increased intracranial pressure, as well as their effects on patient hemodynamics. The student will also be introduced to means of monitoring pressure monitors and external ventricular drains. Additionally, the student will become familiar with common ICU management practices including central lines, arterial lines, and ventilator management. The student will be expected to round daily with the attending and the team. The student may participate in additional educational activities within the Departments of Surgery including ICU lectures, Morbidity and Mortality conferences and Grand Rounds.

FMFM 8301 (Amarillo HSC, Covenant Branch HSC, Odessa HSC) Family Medicine Sub-Internship Patients of all ages, of both sexes, and with diverse medical problems will be managed in this sub-internship. Emphasis will be given to the total management of the patient, beginning with the ambulatory presentation, continuing through hospitalization and following dismissal from the hospital-coordinated, comprehensive, continuing medical care. The student will be responsible for complete evaluation of the patient, including initial
This rotation will replicate the role of an Intern on a very busy hospital medicine service where the reporting physician is not another resident, but an attending for one on one mentoring. A very broad exposure to the entire swath of inpatient within the Academic Teaching hospital will be experienced.

MFM 8302 Sub Internship in Hospital Medicine
This rotation will replicate the role of an Intern on a very busy hospital medicine service where the reporting physician is not another resident, but an attending for one on one mentoring. A very broad exposure to the entire swath of inpatient within the Academic Teaching hospital will be experienced.

MINT 8301 (Aramillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Internal Medicine Sub-Internship
This ward-based, primary care sub-internship provides the student an individualized, case-oriented experience as a sub-intern on a general medicine ward service, designed to be the natural extension of the third-year clerkship. Each student will work closely with a senior resident, have primary patient responsibility, take night call with his/her team, have patient care responsibilities as an intern with close supervision by the senior resident, be assigned readings and give mini-lectures on selected subjects, and attend the regularly scheduled teaching conferences of the Department of Internal Medicine. This sub-internship is strongly recommended for students planning to pursue a career in Internal Medicine.

MOBG 8302 (Aramillo HSC, Lubbock HSC, Odessa HSC) Maternal Fetal Med Sub-I
This four week Sub-Internship will provide the student the opportunity to function as a first year resident in the MFM service. The student will gain ample exposure on the rotation in order develop the skills to recognize the clinical and laboratory diagnosis of medical, surgical, and obstetric complications of the high-risk pregnancy. The student will review the literature on and develop the skills to manage the fetal/neonatal complications of post term pregnancy, including the indications for induction of labor, and review the evaluation and management of the following conditions which complicate pregnancy: preterm labor, hypertensive disorders of pregnancy, and diabetes. During their time in the rotation, the student will be expected to discuss the essential knowledge base of a gynecologist in this population. Following the rotation, students will be able to manage: advanced maternal age and abnormal maternal serum screening. While managing patients in labor and delivery the student will learn to interpret fetal heart rate tracings in laboring and non-laboring patients, gain the skills necessary to succinctly communicate patient sign out and hand offs on the high risk patients that she/he is following, and effectively manage obstetric emergencies and gynecologic complications. The student will also have the opportunity to perform/assist in vaginal and abdominal deliveries, including laceration repair, cesarean delivery repair and forceps assisted vaginal deliveries, and they will also be given the opportunity to improve their basic knot tying skills with a self-directed suture curriculum. The student will prepare for and participate in Friday morning didactics.

MOBG 8303 (Aramillo HSC, Lubbock HSC) Gynecology Sub-Internship
This four week Sub Internship will provide the student the opportunity to function as a first year resident on the Gynecologic service. The student will evaluate, present, and manage patients that present to the clinic and the EC with gynecologic complaints and participate in and care for patients that undergo gynecologic surgery. On days assigned to the operating room the students will be expected: to prepare for and perform as a surgical assistant for assigned gynecologic cases, cooperate with the operating room nursing and ancillary staff, and become proficient in preoperative 'time out', and illustrate proper aseptic technique, and patient positioning in the operating room. Prior to surgical cases the student will review the surgical steps for and complications of commonly performed gynecologic surgeries as well as recent literature in regard to surgical outcomes. The student will gain experience in eye-hand coordinated movements relevant to basic laparoscopy in the simulation lab and with knot tying using a self-directed suture curriculum. The student will demonstrate effective communication skills regarding patient sign out and hand off, recognize and participate in systems improvements, and communicate with nursing and ancillary staff to promote teamwork, and patient care. The student will prepare for and attend Friday afternoon didactics including the participation in preoperative surgical conference.

MORS 8301 (Aramillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Orthopaedic Surgery Sub-Internship
The Orthopaedic Surgery Sub-I offers fourth year medical students with a strong interest in the Orthopaedic Surgery subspecialty, an opportunity to acquire and assimilate advanced clinical responsibilities at an intern level, exposure to orthopaedic patients in various clinical settings: inpatient, outpatient, and operating room. This four-week elective rotation will provide an educational curriculum that emphasizes teaching of fundamental concepts of the Orthopaedic Surgery subspecialty. Each student will be assigned to a different faculty mentor for each week in order to learn and apply information for a variety of musculoskeletal/medical disorders, based on the patient group for which he/she is responsible. This will assist in maximizing academic preparation for postgraduate clinical performance as an intern. The sub-intern will function as the primary point of contact, assisted by an Orthopaedic resident, and supervised by the attending for the care of patients. The student will participate in patient care, including the participation in preoperative surgical conference. The student will prepare for and attend Friday afternoon didactics including the participation in preoperative surgical conference.

MPED 8301 (Aramillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Pediatric Subinternship
This course will work as a member of a team caring for patients admitted to the pediatric inpatient service. During this elective, the student will have an opportunity to learn to formulate problem lists, management, and follow-up plans for hospitalized pediatric patients. The student assumes the role of inpatient team and takes call with the residents.

MSUR 8301 (Aramillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) General Surgery Subinternship
The student will serve as an extern on the surgical service and participate in the care of surgical patients in the emergency room, surgical wards, ambulatory surgery and clinic. Pre-and post-operative care of the patient undergoing management of patients in the Surgical Intensive Care units will be stressed. Assignments to selected surgical faculty preceptors are also available. Students will take in-house call.

MSUR 8303 (Covenant Branch HSC) Neurological Surgery Sub-Internship
The Neurosurgical Sub-I offers fourth year medical students with a strong interest in the Neurological Surgery subspecialty, an opportunity to acquire and assimilate advanced clinical responsibilities at an intern level, by exposure to neurological patients in various clinical settings: inpatient, outpatient, and operating room. This four-week elective rotation will provide an educational curriculum that emphasizes teaching of fundamental concepts of the Neurological Surgery subspecialty. Each student will be assigned to a different faculty mentor for each week in order to learn and apply information for a variety of musculoskeletal/medical disorders, based on the patient group for which he/she is responsible. This will assist in maximizing academic preparation for postgraduate clinical performance as an intern. The sub-intern will function as the primary point of contact, assisted by a Neurosurgical resident, and supervised by the attending for the care of patients. The student will participate in patient care, including the participation in preoperative surgical conference. The student will prepare for and attend Friday afternoon didactics including the participation in preoperative surgical conference.

MURU 8301 Urology Sub I
This Sub-I is an advanced experience in the management of disorders of the urinary tract and is designed to provide the student with an understanding of the principles of urological diagnosis and treatment. Students will participate in a series of lectures, ward rounds, operating room and clinical experiences. The course is of value to a student interested in a career in urology, gynecology or surgery.

MIDS 5402 (Lubbock HSC) Advancement of Patient Safety
This course will introduce the healthcare student to the concepts in promoting and providing patient safety. Archived videos and live content expert presentations will be a framework of knowledge which the student then apply to vignettes involving a sentinel event. Completion of this course will prepare the student with the fundamental knowledge required for the interprofessional root cause analysis course (CLARION). The goal of this course is to provide the all students of the Texas Tech University Health Sciences Center with the opportunity to practice the core competencies recommended by the Institute of Medicine (IOM). The IOM recommends that health-care professionals be educated in health professions education: patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement and informatics. In this course students will work in interprofessional teams as they study the following concepts: root cause analysis, audit analysis, professional conduct and policies, team communication, legislative initiatives, information technology.

MIDS 6402 (Lubbock HSC) Advancement of Patient Safety
This course will introduce the healthcare student to the concepts in promoting and providing patient safety. Archived videos and live content expert presentations will be a framework of knowledge which the student then apply to vignettes involving a sentinel event. Completion of this course will prepare the student with the fundamental knowledge required for the interprofessional root cause analysis course (CLARION). The goal of this course is to provide the all students of the Texas Tech University Health Sciences Center with the opportunity to practice the core competencies recommended by the Institute of Medicine (IOM). The IOM recommended in a 2003 publication entitled "Health Education: A Bridge to Quality" that five core competencies be integrated into health professions education: patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement and informatics. In this course students will work in interprofessional teams as they study the following concepts: root cause analysis, audit analysis, professional conduct and policies, team communication, legislative initiatives, information technology.

MIDS 5417 (Lubbock HSC) Art in Medicine
The relationship between artistic engagement and patients’ health has also been well documented. Multiple studies strongly suggest that artistic activities can have a positive effect on health. For this reason, many health professionals have begun implementing creative exercises as a form of health-care and patient practice. This course will help medical students to learn how the arts can help them develop both critical thinking and empathy to better understand their patients’ illness experiences, the medical team-patient relationships, physician self-care, and various other aspects of healthcare.

MIDS 6417 (Lubbock HSC) Art in Medicine
The relationship between artistic engagement and patients’ health has also been well documented. Multiple studies strongly suggest that artistic engagement has a positive affect on health. For this reason, many health professionals have begun implementing creative exercises as a form of health-care and patient practice. This course will help medical students to learn how the arts can help them develop both critical thinking and empathy to better understand their patients’ illness experiences, the medical team-patient relationships, physician self-care, and various other aspects of healthcare.

MORS 5402 (Lubbock HSC) Art in Medicine
This course will introduce the medical student to the concepts in promoting and providing patient safety. Archived videos and live content expert presentations will be a framework of knowledge which the student then apply to vignettes involving a sentinel event. Completion of this course will prepare the student with the fundamental knowledge required for the interprofessional root cause analysis course (CLARION). The goal of this course is to provide the all students of the Texas Tech University Health Sciences Center with the opportunity to practice the core competencies recommended by the Institute of Medicine (IOM). The IOM recommended in a 2003 publication entitled "Health Education: A Bridge to Quality" that five core competencies be integrated into health professions education: patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement and informatics. This course is designed by medical students for medical students to help prepare us during our pre-clinical years to

There is a growing population of students who are interested in cultivating their understanding about the global health field to

The advancements happening today are numerous and far reaching. The problem with today’s healthcare is that without the active pursuit, collaboration, and implementation of new research and peer-reviewed science into the clinical setting, progress will be slow and treatment of patients will be suboptimal. With this class, MS1s and MS2s will be able to hear from lecturers about what is nascent in the world of science today and how they try and use it for patient care. There will also be discussion sessions that will have students reading and sharing thoughts about recent peer-reviewed articles. Pre-chosen peer-reviewed articles will be available for each group session with the option of finding and reading outside articles that align with the month’s theme and are of interest to the student. They will discuss how these advances can help and how they would integrate the information into today’s and tomorrow’s medicine.

A growing population of students who are interested in cultivating their understanding about the global health field to facilitate career choice decisions and future humanitarian involvement. The primary goal of this course is to expose students to topics in global health, to also tailor the knowledge to include theory and real-world practice. Students will complete learning modules ranging from cultural competency, relevant global issues, to the process of building a clinic on their own. As part of this real-world practice, health simulations concerning two common global health issues – malaria and cholera, will be incorporated. Accordingly, another major goal is to help students understand and prepare for the potential challenges that they might face during an international health mission in a resource-deprived setting. It is recognized that interprofessional interactions vary greatly depending on the nature of the clinic, the location of the clinic, the situation, and resources available. In recognition of the different roles required, there will also be clinical activities that cultivate clinical skills not covered elsewhere in the curriculum.

There is a growing population of students who are interested in cultivating their understanding about the global health field to facilitate career choice decisions and future humanitarian involvement. The primary goal of this course is to expose students to topics in global health, to also tailor the knowledge to include theory and real-world practice. Students will complete learning modules ranging from cultural competency, relevant global issues, to the process of building a clinic on their own. It is recognized that interprofessional interactions vary greatly depending on the nature of the clinic, the location of the clinic, the situation, and resources available. In recognition of the different roles required, there will also be clinical activities that cultivate clinical skills not covered elsewhere in the curriculum.

This elective will educate interested medical, nursing, and health profession students about healthcare public policy in the US. It will cover a broad range of topics, including medical malpractice, reimbursement and revenue systems, insurance practice, controversial policy topics, and how best to contact your local, state, and national representatives. Along with lectures, students will participate in a hands-on activity where they will learn how to create and present a Leave Behind pamphlet.

This elective will educate interested medical, nursing, and health profession students about healthcare public policy in the US. It will cover a broad range of topics, including medical malpractice, reimbursement and revenue systems, insurance practice, controversial policy topics, and how best to contact your local, state, and national representatives. Along with lectures, students will participate in a hands-on activity where they will learn how to create and present a Leave Behind pamphlet.

This elective will complement the curriculum for medical students by providing a discussion based seminar series in raising awareness on the topic of human trafficking. This course will incorporate lectures from professionals that have firsthand experience in assisting victims and survivors of human trafficking.

This elective is site specific with site specific learning objectives. This elective allows students to experience the challenges of health care delivery with a required physician supervisor/evaluator in an underserved international setting for 4 weeks.

This elective course focuses on the students’ professional development in assessing the healthcare as a system and
This course focuses on the students' professional development in assessing the healthcare as a system and practicing high performing interprofessional team skills that are necessary to achieve the six aims outlined by the Institute of Medicine (IOM). While working in interprofessional teams, learners apply their professional knowledge and team skills to resolve and reduce errors of a fabricated sentinel event, case study. Experimental activities provide hands-on opportunities for students to develop a broad knowledge of the healthcare system and skills.

MIDS 6401 Interprofessional Teamwork Honors

This elective will educate first and second year medical students about the field of obstetrics and gynecology. Students will gain knowledge about different sub-specialties such as Reproductive Endocrinology and Infertility, Maternal and Fetal Medicine, Female Pelvic Medicine and Reconstructive Surgery and Gynecologic Oncology.

MIDS 6416 (Lubbock HSC) Introduction to Obstetrics and Gynecology

This elective will educate first and second year medical students about the field of obstetrics and gynecology. Students will gain knowledge about different sub-specialties such as Reproductive Endocrinology and Infertility, Maternal and Fetal Medicine, Female Pelvic Medicine and Reconstructive Surgery and Gynecologic Oncology.

MIDS 6416 (Lubbock HSC) Introduction to Obstetrics and Gynecology

This elective will educate first and second year medical students about the field of obstetrics and gynecology. Students will gain knowledge about different sub-specialties such as Reproductive Endocrinology and Infertility, Maternal and Fetal Medicine, Female Pelvic Medicine and Reconstructive Surgery and Gynecologic Oncology.

MDCS 6404 (Lubbock HSC) Introduction to Anesthesiology Elective

This elective will introduce the students to the specialty of anesthesia. The student will attend different lectures on how to read and understand financial statements, do some simple financial calculations, and utilize common management techniques and concepts.

MDSI 6401 (Lubbock HSC) Introduction to Clinical Research

At the beginning of the elective, each student will be assigned to a research coordinator and will be increasingly involved in working with that coordinator on the studies they are running. An opportunity will be given for the students to choose between various ongoing studies, but this must be done early since they must have passed the CITI training and have IRB approval to participate in individual studies. Each student should be involved both with studies involving human subjects and those involving chart reviews. It would be anticipated that the students would receive authorship on any publication resulting from studies on which they are involved, provided that their participation is meaningful. Early in the elective, there will be an emphasis on didactic material beginning with discussions about the regulations and ethical considerations related to research in humans, the background for these and the role played by the IRB and an Office of Research Integrity. This will be followed by sessions on various topics as proposed by a research project from conception of the idea through formulation of a hypothesis and specific aims, compiling the background, constructing the appropriate methods and analysis and finally, a discussion of the potential significance. It will be expected that each student will develop a proposal/prospectus during the elective with an ongoing active critique process.

MDSI 6421 (Lubbock HSC) Introduction to Research

We define the perceived barriers TTUSHC SOM students have concerning research as limited knowledge in research foundations, institutional opportunities, and scholastic commitment. The aim of our elective would be to deliver informative research content addressing these barriers. The content will be delivered in didactic lectures and interactive workshops which will build research foundations including the basic principles of research. Students will learn what clinical research is, and how to design, conduct, and interpret clinical studies. Students will explore the ethical, legal, and regulatory aspects of clinical research and the importance of informed consent.

MCSI 6450 (Lubbock HSC) Introduction to Ultrasound Elective

This elective is for students to obtain more hands-on experience in ultrasound skills and to recognize pathologies frequently observed through ultrasound. There will be a series of 10-30 minute lectures followed by hands-on practice of techniques for that session using ultrasound machines and a few lecture-only sessions. Lectures will be based on systems followed by procedures in the last two sessions. Students will be given the opportunity to shadow either a physician or ultrasound tech to experience and to see how and when ultrasounds are used in a clinical setting. At the end of the elective, students will have greater experience and confidence in using ultrasounds in clinical settings.

MCSI 6458 (Lubbock HSC) Introduction to Ultrasound Elective

This elective is for students to obtain more hands-on experience in ultrasound skills and to recognize more frequently encountered pathologies observed through ultrasound. There will be a series of 10-30 minute lectures followed by hands-on practice of techniques for that session using ultrasound machines and a few lecture-only sessions. Lectures will be based on systems followed by procedures in the last two sessions. Students will be given the opportunity to shadow either a physician or ultrasound tech to experience and to see how and when ultrasounds are used in a clinical setting. At the end of the elective, students will have greater experience and confidence in using ultrasounds in clinical settings.

MCSI 6460 (Lubbock HSC) Introductory Neurology Elective

This rotation exposes the student to basic principles of diagnosis and management of common neurologic conditions. Students learn skills in conducting neurologic exams, identifying signs and symptoms of neurologic disorders, and integrating signs and symptoms into syndromes. Students learn about basic neurologic disorders and neurologic complications of systemic conditions.

MDSI 6426 Lesbian, Gay, Bisexual, and Transgender Health Education

This elective course is designed to educate students on the basics of providing care to Lesbian, Gay, Bisexual, and Transgender (LGBT) individuals. These aspects include awareness of the social and behavioral determinants of health that are unique to LGBT individuals, how to assess and communicate with patients who identify as LGBT, understanding the health risks/treatment options associated with this marginalized patient population. This course follows the Fenway Guide to LGBT Health and aims to cultivate clinical skills and competencies for LGBT-centered healthcare, as supported by the American Medical Association.

MDCS 6426 Lesbian, Gay, Bisexual, and Transgender Health Education

This elective course is designed to educate students on the basics of providing care to Lesbian, Gay, Bisexual, and Transgender (LGBT) individuals. These aspects include awareness of the social and behavioral determinants of health that are unique to LGBT individuals, how to assess and communicate with patients who identify as LGBT, understanding the health risks/treatment options associated with this marginalized patient population. This course follows the Fenway Guide to LGBT Health and aims to cultivate clinical skills and competencies for LGBT-centered healthcare, as supported by the American Medical Association.

MDSI 6407 (Lubbock HSC) Medical Business Elective

This elective will educate first and second year medical students about the fundamentals of business in medicine, be it a starting a private practice or working in a hospital. This elective will highlight the fundamentals in accounting, finance, management, and marketing, while providing a list of resources for the students to obtain if they desire to learn more. After completing the fundamental curriculum, basic business applications will be taught. This would include an overview of the current healthcare system, health organization management, electronic health records, billing and coding, reimbursement, advance directives, and wills. Students will be instructed on how to read and understand financial statements, do some simple financial calculations, and utilize common management techniques and concepts. These educational goals are invaluable to anyone interested in a future career in medicine.

MDCS 6407 (Lubbock HSC) Medical Business Elective

This elective will educate first and second year medical students about the fundamentals of business in medicine, be it a starting a private practice or working in a hospital. This elective will highlight the fundamentals in accounting, finance, management, and marketing, while providing a list of resources for the students to obtain if they desire to learn more. After completing the fundamental curriculum, basic business applications will be taught. This would include an overview of the current healthcare system, health organization management, electronic health records, billing and coding, reimbursement, advance directives, and wills. Students will be instructed on how to read and understand financial statements, do some simple financial calculations, and utilize common management techniques and concepts. These educational goals are invaluable to anyone interested in a future career in medicine.

MSCI 5403 (Lubbock HSC) MSI International Health Elective

This elective is site specific with site specific learning objectives. This elective allows students to experience the challenges of health care delivery with a required physician supervisor/evaluator in an international setting for 4 weeks.

MDSI 5403 (Lubbock HSC) Pre-Hospital Medicine Elective

This elective will educate first and second year medical students about one of the major routes in which patients enter the healthcare field, namely the emergency room. Students will gain knowledge about what the patient encounters, beginning with first responders, through each subsequent step prior to hospital admission, and thus have a better understanding of the comprehensive care that a patient receives before they present to the ED physician. This educational goal is invaluable to those who are interested in a future career as Emergency Medicine physicians.

MDSI 5403 (Lubbock HSC) Pre-Hospital Emergency Elective

This elective will educate first and second year medical students about one of the major routes in which patients enter the healthcare field, namely the emergency room. Students will gain knowledge about what the patient encounters, beginning with first responders, through each subsequent step prior to hospital admission, and thus have a better understanding of the comprehensive care that a patient receives before they present to the ED physician. This educational goal is invaluable to those who are interested in a future career as Emergency Medicine physicians.

MDSI 6406 (Lubbock HSC) Preventive Medicine Elective

This elective will educate first and second year medical students about the potential to incorporate preventive practices in medicine. This will involve a series of events including brown bag lectures, film screenings, and round-table discussions. A service component will also be required to complete the course. At the end of the elective, students should have a greater awareness about the need for preventive education for their future patients, and about the various ways in which they can utilize preventive practices as future physicians.

MDSI 5406 (Lubbock HSC) Preventive Medicine Elective

This elective will educate first and second year medical students about the potential to incorporate preventive
The Resiliency Peer Program is in response to the Student Wellness Committee's identification of a significant need for educating our peers about topics in mental health and burnout prevention. The program is aimed at equipping medical students with tools to better manage stress and reduce burnout by forming a support system of medical students and faculty who are informed about techniques to support student wellness. Currently the program exists in the form of a Spring 2021 elective.

MIDS 419 (Lubbock HSC) Resiliency Peer Program Elective The Resiliency Peer Program is in response to the Student Wellness Committee’s identification of a significant need for educating our peers about topics in mental health and burnout prevention. The program is aimed at equipping medical students with tools to better manage stress and reduce burnout by forming a support system of medical students and faculty who are informed about techniques to support student wellness. Currently the program exists in the form of a Spring 2021 elective.

MIDS 5408 (Lubbock HSC) Rural Health Elective This course will present opportunities to heighten understanding of rural health experiences and challenges. The purpose of the Rural Health Elective is to provide students an opportunity to explore and experience the practice of medicine in rural America. It also aims to raise interest in and awareness of the current state of rural healthcare both locally and nationally. Such an elective would aid in furthering TTUHSC SOM’s mission to “meet the growing needs of a diverse and largely rural patient population” and “enhance the health care of communities in the (West Texas) region”.

MIDS 6408 Rural Health Elective This course will present opportunities to heighten understanding of rural health experiences and challenges. The purpose of the Rural Health Elective is to provide students an opportunity to explore and experience the practice of medicine in rural America. It also aims to raise interest in and awareness of the current state of rural healthcare both locally and nationally. Such an elective would aid in furthering TTUHSC SOM’s mission to “meet the growing needs of a diverse and largely rural patient population” and “enhance the health care of communities in the (West Texas) region”.

MIDS 5410 (Lubbock HSC) Service in Medicine “Service-learning” in medical education is important and often overlooked in curricula. Fostering medical student interests in becoming more service-oriented is vital to delivering compassionate and comprehensive care to patients. Multiple studies have observed the link between serving community needs and being a practitioner that is able to understand the environments which factor in to the holistic review of a patient. By establishing an elective that provides both service opportunities and lectures from service-oriented physicians, medical students will be able to have a clear goal on how to combine medicine with service.

MIDS 6410 (Lubbock HSC) Service in Medicine “Service-learning” in medical education is important and often overlooked in curricula. Fostering medical student interests in becoming more service-oriented is vital to delivering compassionate and comprehensive care to patients. Multiple studies have observed the link between serving community needs and being a practitioner that is able to understand the environments which factor in to the holistic review of a patient. By establishing an elective that provides both service opportunities and lectures from service-oriented physicians, medical students will be able to have a clear goal on how to combine medicine with service.

MSCI 5401 (Lubbock HSC) Surgical Anatomy This course will provide an introduction and overview to surgical approaches to different regions of the human body from a clinical perspective. The student will learn to identify anatomical landmarks important for surgery and to assist surgeons with surgical dissections of cadavers. The experience in Surgical Anatomy will provide students with a relevant correlation of anatomy as applied to surgical procedures.

MSCI 5402 (Lubbock HSC) The Patient Experience in Film Monthly viewing of a film depicting a unique aspect of the patient experience. A smaller group of students enrolled in the elective will be assigned to preview the film and lead the post-film discussion (on a rotating basis). At the end of the year each student will select a film to watch independently and write a report on the unique aspect of the patient experience it portrays and how it will affect their future practice in medicine.

MSCI 8401 Special Topics in Medicine Special topics in medical sciences that are not included in other classes in the medical school curriculum. May not be repeated for credit within an academic year.

MANE 8401 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Anesthesiology This elective is for students interested in anesthesiology and the insights this discipline gives into the application of physiological and pharmacological principles to the care of patients in acute life-threatening situations. Daily lectures, laboratory demonstration, and the pre-operative and post-operative care of patients undergoing anesthesia will enable the student to acquire the basic skills necessary to care for the unconscious and critically ill patient during anesthesia and other similar situations. These skills include airway management, ventilatory support, cardiovascular support, fluid replacement, and intravenous techniques. The student will also have an opportunity to learn the fundamentals of respiratory therapy and its application to patient care.

MANE 8402 (Covenant Branch HSC, Lubbock HSC) Anesthesiology and Pain Center Elective The student will evaluate patients using common pain assessment tools and participate in the supervision of the Pain Attendings and Pain Management Fellows in the clinic. They will develop algorithms for treatment including pharmacologic, non-interventional and interventional therapies. The remaining time will be spent observing pain procedures in the operating room and the procedure clinic.

MCBA 8401 (Lubbock HSC) Advanced Gross Anatomy I This elective is a two-week or four-week, in-depth, self-directed review of a selected area of gross anatomy including: head and neck, thorax and abdomen, pelvis and perineum, extremities and back, or anatomical imaging depending on the needs of the student.

MDER 8402 (Lubbock HSC, Odessa HSC) Dermatology Clinics Elective This elective is designed to expose the student to a wide variety of dermatologic conditions with the expectation that the conclusion of this experience will be a comprehensive understanding of the diseases. The student will participate in clinics (few inpatient consults) observing a variety of dermatologic disorders and dermatologic procedures in both the adult and pediatric patient population. Also offered is exposure to dermatopathology and dermatologic surgery, thus allowing clinicopathologic connections.

MDER 8402 (Lubbock HSC) Dermatopathology Elective This elective is designed to give 4th year medical students exposure to and experience in dermatopathology.

MSUR 8423 (Amarillo HSC, Lubbock HSC, Odessa HSC) Emergency Medicine Elective The student will be exposed to the wide variety of surgical and medical emergencies seen on a regular basis in the emergency center. Under the supervision of the emergency center attending physicians, students will participate in the management of various emergencies, including trauma, medicine, pediatrics, and obstetrics and gynecology. The student will have ample opportunity to participate and learn the interpretation of EKG, radiologic studies and other diagnostic tests. The student will learn to perform several minor procedures including suturing small lacerations, casting and splinting and placement of central lines and chest tubes.

MSUR 8401 (Amarillo HSC, Covenant HSC, Lubbock HSC, Odessa HSC) Otolaryngology/Head/Neck Surgery This is an advanced experience in the management of patients with diseases of the ear, nose, and throat. This includes diseases of the airway, esophagus as well as head and neck cancer. Included are a series of lectures, rounds, and clinical experiences with a review of pathology. The course is of value to both a primary care physician as well as a student interested in a career as a surgeon.

 MFAM 8401 (Odessa HSC) Family Medicine Preceptorship Students are assigned to a variety of practices within the urban or rural area for a supervised exposure to day-to-day practice problems. Emphasis is on the application of clinical skills within the demands and limits of actual practice. Program is sponsored by the Texas Academy of Family Practitioners. Applications must be completed several months in advance.

MFAM 8402 (Covenant Branch HSC, Lubbock HSC) Palliative Care/Hospice Experience Elective This elective allows students to gain additional skills and experience with end-of-life care including pain management, bereavement counseling, and interdisciplinary team work with multidisciplinary care teams that provide holistic medical management of persons near death, with a special emphasis on symptoms and decision management at the end of life.

MFAM 8404 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Family Medicine Outpatient Elective This elective is set in an ambulatory clinic and emphasizes the breadth of family medicine. The student will have an opportunity to care for a wide variety of simple and complicated problems, practice patient counseling and education skills, and to be able to see some patients through a brief illness with follow-up care. Family-oriented health care, family dynamics, preventive care and the team approach to health care are emphasized.

MFAM 8405 (Amarillo HSC, Lubbock HSC, Odessa HSC) Family Med Subinternship Elective Patients of all ages, of both sexes, and with diverse medical problems will be managed in this sub-internship. Emphasis will be given to the total management of the patient, beginning with the ambulatory presentation, continuing through hospitalization and following the patient's dismissal from the hospital. The student will be responsible for complete evaluation of the patient, including history and physical examination, cost effective utilization of laboratory, x-ray and other procedures and the formulation and pursuit of the management plan, including cogan collaboration and communication. The student will also be given to participate in community resources, which will provide ongoing care of the patient, including Hospice and community referral opportunities. The student will work in the Family Practice Center, the patient's home, or any other location. This experience can be repeated up to a maximum of two times in the 4th year.

MFAM 8407 Sub Internship in Hospital Medicine Elective This rotation will replicate the role of an Intern on a very busy hospital medicine service where the reporting physician is not another resident, but an attending for one on one mentoring. A very broad exposure to the entire swath of inpatient within the Academic Teaching hospital will be experienced.

MFAM 8406 (Lubbock HSC) Geriatric Medicine Elective This elective provides an introduction to geriatric assessment and evaluation. Topics covered include:
International Health Elective
Endocrinology Elective
Gastroenterology Elective
This ward-based elective offers the student an opportunity to evaluate and care for patients with endocrine disorders, emphasizing acute and chronic renal failure, hypertension, fluid and electrolyte imbalances, acid base disturbance, parenchymal renal diseases, etc. Students will be expected to formulate a manuscript proposal, usually based on a case report format and to complete research/literature reviews in a chosen topic area. Students will work with relevant faculty in developing their plan and will receive instruction on manuscript preparation, formatting, referencing, copyediting, etc. Students will also receive instruction on manuscript submission processes, manuscript review and other aspects of the publication process.

MIDS 411 (Lubbock HSC) Health Law
The Health Law elective is rotation to provide the MD/JD candidate an overview into the interface between law and medicine. Legal implications in the field of medicine occur almost daily, and having a basic understanding in law will vastly enhance a medical student's, and practitioner's, grasp of the expansive responsibilities in one's medical career.

MIDS 412 (Lubbock HSC) MD/JP Prep for Bar
The one month Independent Study MD/JD Elective would allow the TTUHSC student enrolled in the MD/PhD program an opportunity to prepare and take the Texas State Bar Exam.

MIDS 413 (Amarillo HSC, Lubbock HSC) Point-of-Care Appl Ultrasound
Ultrasound (US) has become an indispensable diagnostic imaging modality because of its real-time capabilities and non-invasiveness. The student should be able to interpret two-dimensional US images of the heart, liver, spleen, uterus, kidneys, and abdomen. The student will learn the use of intravenous contrast material or the potential hazards of ionizing radiation. Therefore, many medical and surgical subspecialties have embraced the use of US as an adjunct to or extension of the physical examination. Some have referred to it as the "sono-scope." Others have described US as "the visual stethoscope of the 21st century". The use of US beyond its traditional role with the department of radiology has been termed "point of care" US.

MIDS 414 (Odessa HSC) Spanish Immersion and Border Health
This course would occur in Presidio, Texas at Presidio County Medical Clinic over a one month period. The student will enter Spanish-speaking patients at least a half day each of the 5 days per week. The other time will be dedicated to Spanish language instruction and work on a project. The student will work under the direction of a local medical provider and learn the basics of providing health care in Spanish for both US and foreign patients.

MIDS 415 (Lubbock HSC) Health Care Policy Care
This course will provide the students an introduction to health care policy. They will learn to follow bills through the legislative process to statutes and then follow the statute to rulemaking at the agency level. The student will learn advocacy from different perspectives and be able to discuss the governance of public health agencies. They will be introduced to the process of writing a white paper for government use.

MIDS 417 (Lubbock HSC) Medical Humanities Capstone
This four year elective course will provide medical students with an intensive study of the Medical Humanities and their relation to the practice of medicine through an immersion experience in the medical humanities. The goal of this course is to provide students with a broad exposure to medical humanities through courses, attendances at the National Medical Humanities Network, health care policy, legal, social, and ethical issues. Students will have an opportunity to study (a) the context of medicine, (b) the experience of medicine, (c) the goals of medicine, and (d) concepts in and of medicine.

MIDS 420 (Lubbock HSC) Thinking in 3D: An introduction to 3D Printing and Medical Imaging
This two week, 2-credit elective is designed to provide the fourth-year medical student with the basic competencies in 3D modeling and printing using medical imaging data. The student will assess medical scan data to determine the appropriate method for the 3D conversion. Collaboratively, the student explores applications of relational thinking as it applies to the 3D modeling process and everyday medical practice. At the end of the rotation, the student is given a case-study to examine, diagnose and develop a 3D application for the diagnosis.

MIDS 421 (Lubbock HSC) Introduction to Correctional Healthcare
Correctional Healthcare involves more than just seeing a free health care provider, especially considering the health care needs of a population with significant health care needs. This rotation will teach the student to work with patients both in the jail and in a prison setting, to work with the medical provider who sees patients both in the jail and in a prison setting, to work with the medical provider who sees patients in the community, to work with the medical provider who sees patients in the community, to work with the medical provider who sees patients in the community. The student will be expected to participate in procedures such as joint aspiration and injection, and will interpret synovial fluid studies. Students will learn the correct indications and monitoring of common rheumatic drugs and the fundamentals of rheumatic rehabilitation.

MIDS 422 (Lubbock HSC) Allergy/Immunology
This ambulatory consult service elective offers the student an opportunity to evaluate and manage patients with allergic disorders, such as allergic rhinitis, bronchial asthma, urticaria/angioedema, food and drug allergy, stinging insects allergy, immunodeficiency disorders, etc. Different topics in allergy and clinical immunology will be discussed two to three times per week. Students may also take a combined Ambulatory Allergy, Rheumatology, and Clinical Immunology rotation.

MIDS 424 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) International Health Elective
This elective is specific with site specific learning objectives. This elective allows students to experience the challenges of health care delivery with a required physician supervisor/evaluator in an underserved international setting for 2-4 weeks.

MIDS 4802 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) International Medicine Elective
This elective offers an in-depth look at the clinical array of rheumatologic disorders. Students will be exposed to patients and observe the importance of diagnosis and long-term management of common rheumatic diseases. Depending on the student's level of proficiency and interest, the student may be allowed to participate in procedures such as joint aspiration and injection, and will interpret synovial fluid studies. Students will learn the correct indications and monitoring of common rheumatic drugs and the fundamentals of rheumatic rehabilitation.
The field of radiation oncology is an intellectually challenging field, providing curative therapy and close longitudinal doctor-patient relationship. This elective may be taken by itself or combined with the hematology-oncology elective.

Hospice Elective

The student will observe hospice patients in both inpatient and outpatient settings, making daily inpatient rounds, accompanying hospice team members on home visits, and meeting with the hospice team to discuss management problems. Reading will focus on common management problems, with an emphasis on competent pain management.

Women’s Health Elective

Women’s Health is a division of the Department of OB/GYN with full-time faculty of board-certified internists Marjorie Jenkins, M.D. and Joanna Wilson, D.O. Departments with faculty participating in student instruction during the rotation include Internal Medicine, General Surgery, and Radiology. The rotation objectives incorporate Texas Tech’s vision, goals, and objectives as stated in the Institutional Educational Vision, Goals, and Objectives publication.

Heart Station

This rotation is a non-patient contact rotation. It will consist of reading and interpreting ECGs.

Hematology/Oncology Outpatient Rotation

This rotation in Hem/Onc clinic prepares the student in an outpatient setting where they get exposed to patients with hematological and medical oncology conditions. The aim is to make students more comfortable and confident in doing focused and time limited interaction in an outpatient setting and expose them to supportive management of chronic blood dyscrasias and the cancer patient. Highly recommended for students pursuing careers in Internal or Family Medicine.

Internal Medicine Outpatient Elective

This elective rotation in internal medicine’s multiple specialty clinics provides students exposure to patients in various disciplines of medicine. The aim is to make students more comfortable and confident in doing focused and time limited interaction in an outpatient setting, which is where most will practice in the future. Highly recommended for students pursuing career in internal or family medicine.

Hematology Elective

This 2-4 week elective enhances students’ knowledge and skills in the field of hematology.

Clinical Ophthalmology Elective

The student will gain experience in managing common medical emergencies, including cardiopulmonary arrest, hypotension, acute myocardial infarction, cardiogenic shock, and congestive heart failure. The student will also become familiar with the various procedures for surgical intervention, ventilation and medication delivery in the CICU.

Medical Intensive Care Unit Elective

The student will gain experience in managing common medical emergencies, including cardiopulmonary arrest, hypotension, acute myocardial infarction, cardiogenic shock, congestive heart failure, renal failure, and diabetic ketoacidosis. The student is also expected to become proficient in the evaluation and management of common chest problems. These include asthma, chronic obstructive pulmonary disease, pleural effusions, peri-operative complications, pneumonia, atelectasis, respiratory failure, pulmonary function tests, and chest x-rays. The student will also become familiar with the various types of mechanical ventilators, oxygen delivery systems, and methods of delivering inhaled medication.

Biomedical Information Management Elective

This elective is designed to provide the student with basic competencies in biomedical information management. The student is primarily taught the basics of searching the biomedical literature via PubMed. Searching EBVM Reviews, MEDLINE, and other biomedicine information resources.

Neurology Elective

This elective rotates the student to basic principles of diagnosis and management of common neurologic conditions. Students learn skills in conducting neurologic exams, identifying signs and symptoms of neurologic disorders, and integrating signs and symptoms into syndromes. Students learn about basic neurologic disorders and neurologic complications of systemic conditions.

Obstetrics and Gynecology Elective

This elective includes experience in office and hospital obstetrics and gynecology, family planning, gynecological surgery, and formal and informal conferences. The schedule is flexible to accommodate special interest of the student.

Perinatal Medicine Elective

The student will gain experience in high-risk obstetrics clinic, antepartum unit, labor and delivery, and formal and informal conferences. The student will become knowledgeable in the antepartum and intrapartum diagnosis and treatment of medical and obstetrical complications of pregnancy, i.e., diabetes mellitus, hypertension, and pre-eclampsia. The student will also obtain experience with ultrasound. The schedule includes ward and clinic experience.

Obstetrics and Gynecology Sub-Internship Elective

This four week Sub Internship will provide the student the opportunity to function as a first year resident on the Gynecologic service. The student will evaluate, present, and manage patients that present to clinic and the EC with gynecologic complaints and participate in and care for patients that undergo gynecologic surgery. On days assigned to the operating room the students will be expected to prepare for and perform as a surgical assistant assigned gynecologic cases, communicate with operating room nursing and ancillary staff, and become proficient in preoperative ‘time out’, and illustrate proper aseptic technique, and patient positioning in the operating room. Prior to surgical cases the student will review the surgical steps for and complications of commonly performed gynecologic surgeries.

Residents will have the opportunity to gain experience in eye-hand coordination, and office and hospital gynecologic basic laparoscopy in the simulation lab and with knot tying using a self-directed suture curriculum. The student will demonstrate effective communication skills regarding patient sign out and hand off, recognize and participate in systems improvements, and communicate with nursing and ancillary staff to promote teamwork, and patient care. The student will prepare for and attend Friday afternoon didactics including preoperative surgical conference.

Gynecology Sub-Internship Elective

This four week Sub Internship will provide the student the opportunity to function as a first year resident on the Gynecologic service. The student will evaluate, present, and manage patients that present to clinic and the EC with gynecologic complaints and participate in and care for patients that undergo gynecologic surgery. On days assigned to the operating room the students will be expected to prepare for and perform as a surgical assistant assigned gynecologic cases, communicate with operating room nursing and ancillary staff, and become proficient in preoperative ‘time out’, and illustrate proper aseptic technique, and patient positioning in the operating room. Prior to surgical cases the student will review the surgical steps for and complications of commonly performed gynecologic surgeries as well as recent literature in regard to surgical outcomes. The student will gain experience in eye-hand coordinated movements relevant to basic laparoscopy in the simulation lab and with knot tying using a self directed suture curriculum. The student will demonstrate effective communication skills regarding patient sign out and hand off, recognize and participate in systems improvements, and communicate with nursing and ancillary staff to promote teamwork, and patient care. The student will prepare for and attend Friday afternoon didactics including the participation in preoperative surgical conference.

Maternal Fetal Medicine Sub-Internship Elective

This four week Sub Internship will provide the student the opportunity to function as a first year resident on the MFM service. The student will gain ample exposure on the rotation in order to develop the skills to recognize the clinical and laboratory diagnosis of medical, surgical, and obstetric complications of the high-risk pregnancy. The student will formulate a history, perform a focused exam and create a management plan for high-risk obstetric patients. The student will also correctly perform the basic components of a level 1 ultrasound including assessment of: presentation, placentalation, biometry, and amniotic fluid volume.

Clinical Ophthalmology Elective

This elective will consist of an extensive exposure to clinical ophthalmology in a private practice setting. The student will be exposed to acute and chronic eye disease in addition to ophthalmic surgery. The main objective of this elective will be to teach the student how to conduct a thorough examination of the eyes and to orient the student to the common eye conditions that every physician should be able to diagnose and treat.

Orthopaedic Surgery Elective

Students will be assigned to an orthopaedic Faculty member and participate as a member of the orthopaedic team in inpatient and outpatient care, emergency room, and operating room activities. Students should perform history and physical examination of orthopaedic cases and be able to diagnose the condition by performing the appropriate orthopaedic tests. This elective is on a subject assigned by a Faculty member. The student will attend all orthopaedic conferences. This elective is for those students interested in surgical specialties or an in-depth experience in orthopaedic surgery.

Surgical Pathology

This elective will introduce the student to the role of tissue examination in modern medicine. The student may be
Attended and participated in a variety of surgical pathology specimens, including Gross examination of surgical pathology specimens, Staining and interpreting tissue, Frozen-section examination, Light microscopic diagnosis, Cytopathology, Autopsy pathology, and Electron microscopy. Clinical correlation of gross and microscopic findings is emphasized, and there will be a close affiliation with the surgical services and subspecialties. The proportion of time spent in these areas will be tailored to the student's interests. One formal presentation on a laboratory topic of the student's interest will be required in the four-week experience. Attendance and participation in a variety of surgical pathology and inter-service conferences are encouraged. Call is not generally required, but it may enhance the autopsy and surgical pathology experiences.

MPED 8401 (Lubbock HSC) Adolescent Medicine Elective This elective is designed to help students acquire good interviewing skills, a basic knowledge of adolescent physical and psychosocial development, an understanding of adolescent gynecology, basic skills in evaluation and management of sexually transmitted diseases, knowledge of nutrition and eating disorders in teenagers, ability to identify common orthopedic problems, knowledge of psychosocial disorders common in adolescents, and insight into the common medical complaints and problems in this age group as well as chronic illnesses seen in adolescents. Students will also gain insight into the legal and ethical issues involved in the care of the adolescent in the health care facility, community agencies and institutions.

MPED 8403 (Amarillo HSC, Lubbock HSC, Odessa HSC) Pediatric Endocrinology Elective This elective provides exposure to outpatient management of common pediatric endocrine problems. Included will be weight assessment, Type 1 diabetes, congenital hypothyroidism, acquired hypothyroidism, hypophosphatemia, precocious puberty, delayed puberty, congenital adrenal hyperplasia, diabetes insipidus, and disorders of calcium regulation. Limited exposure to inpatient consultations is anticipated. Indications for common endocrine laboratory tests and their interpretation will be reviewed. Endocrine aspects of common pediatric clinical situations will be discussed.

MPED 8405 (Lubbock HSC) Pediatric Infectious Diseases Elective The objective of this elective is to familiarize the student with the clinical and microbiologic approach to common pediatric infectious disease problems. The student will become familiar with the different classes of antimicrobial agents and learn when and how to select appropriate empiric therapy for various infections. The student will participate in the differential diagnosis of pediatric patients presenting with signs and symptoms of an infectious disorder. The student will learn the appropriate laboratory tests and culture techniques for isolation and identification of bacterial, viral, fungal, and parasitic pathogens. Epidemiology and infection control of specific infectious pathogens will be discussed. This elective is primarily an inpatient consultation rotation involving the teaching hospital and two private hospital services with one weekly outpatient clinic for follow-up and consultation. Opportunities for research projects may be available if desired.

MPED 8408 (Amarillo HSC, Odessa HSC) Pediatric Cardiology Elective Students will be provided many opportunities to learn a variety of cardiac problems in pediatric patients. The student will observe or participate in any activities that the pediatric cardiologist will perform in the diagnosis and management of children with cardiac diseases. The student will become familiar with the interpretation of normal and abnormal cardiac manifestations and physical signs of cardiac defects in children. The student will observe non-invasive and invasive diagnostic procedures and will be encouraged to interpret electrocardiograms, echocardiograms, and cardiac catherization data. The student will also have an opportunity to observe cardiac surgery and follow the patient post-operatively with the cardiologist. Sufficient physiopathological background will be provided to make the cardiac problems more comprehensible through lectures, case discussions, and review of pathologic specimens.

MPED 8410 (Amarillo HSC, Lubbock HSC) Pediatric Hematology/Oncology The purpose of this elective is to provide clinical experience to common problems in hematology and oncology by direct contact with patients. At the end of the rotation, students will be able to learn the essential knowledge in evaluating, diagnosis and managing patients with hematologic and oncologic problems, including those related to anemia, coagulation, lymphomas, leukemias and certain solid tumors, and hematologic and oncologic emergencies. The emphasis will be placed on establishing the rapport with patients, logical approach for differential diagnosis, planning the management according to evidence-based medicine for each clinical situation and condition. Students may also participate in diagnosis procedures including lumbar puncture and bone marrow examination.

MPED 8411 (Amarillo HSC) Pediatric Nephrology The purpose of this elective is to familiarize the student with common problems in pediatric nephrology seen in a general pediatric clinic. The student will have the opportunity to interact directly with patients and their caregivers, obtain history and physicals, and discuss common presentations of renal problems. Patients treated will be those with acute renal failure, chronic kidney disease and those with end-stage renal disease. The student will learn diagnostic and management strategies for the common conditions seen in this rotation. The student will be given many opportunities to participate in all aspects of care of the child with renal problems.

MPED 8412 (Amarillo HSC) Pharmacology & Therapeutics This elective is designed to help students understand drug therapy in the management of adult as well as pediatric problems. During this rotation, the student will present several cases from among inpatients either in the Departments of Internal Medicine or Pediatrics. This will be followed by a discussion of the drug therapy used. By the end of the rotation, the student should be familiar with pharmacokinetics, mechanism of action, indications, contraindications, side effects, dosage, and drug interactions of the most commonly used medications.

MPED 8415 (Covenant Branch HSC) Pediatric Neurology Elective This elective provides exposure to outpatient management of common pediatric neurology problems. Included will be delays in developmental milestones, ataxia, change in sensorium, diplopia, headache, head trauma, hearing concerns, gait disturbance, hypotonia, hypothyroidism, seizures, tremor, vertigo, visual disturbances, and weakness. Limited exposure to inpatient consultations is anticipated. Indications for common neurologic laboratory tests and their interpretation will be reviewed. Neurological aspects of common pediatric clinical situations will be discussed. At the end of the rotation, the student should be able to recognize common pediatric neurologic disorders and their presentations.

MPED 8417 (Lubbock HSC) Genetics This 4-week rotation offers students the opportunity to participate in all aspects of a comprehensive genetics in pediatric program including clinical consultations and laboratory testing. The student will participate in genetic evaluation/counseling sessions and observe the cytogenetic/molecular testing that ensues from patient interactions. Students are encouraged to select one patient/family of interest and compile a short case presentation or report by the end of their rotation.

MPED 8418 (Lubbock HSC) Child Abuse and Neglect Elective This elective is designed to prepare future clinicians to successfully identify and refer cases of suspected child abuse and neglect. Learning sessions will be provided on the following topics: Physical abuse and neglect, Sexual abuse, Multidisciplinary work, and Expert medical testimony. Students will have the opportunity to work with professional mentors within the community from the District Attorney's Office, the Police Department, and Children's Protective Services. The student will observe evaluations of children who are suspected victims of abuse and/or neglect with a pediatrician and the sexual assault nurse examiners.

MPED 8419 (Amarillo HSC, Covenant Branch HSC, Lubbock HSC, Odessa HSC) Pediatrics Outpatient Elective The purpose of this elective is to familiarize the student with the clinical presentation and management of outpatient pediatric services. The student will be involved in the medical and psychological problems associated with children who have chronic diseases. The clinics are held every Tuesday. The student will be allowed to have first contact with patients in either the clinic or the hospital. The student will formulate evaluation and treatment plans in conjunction with the pediatric nephrologist. The student will be given many opportunities to participate in all aspects of care of the child with renal problems.

MPED 8420 (Odessa HSC) Pediatrics Allergy and Immunology This one month training experience provides the opportunity for a senior medical student to gain in depth experience with the diagnosis and management of asthma, allergy and immunodeficiency. Outpatient clinical encounters are complemented by reading, presentations and projects depending on the student's interests. The rotation setting is at the office of west Texas allergy Midland. Students are expected to understand the role of the primary care practitioner in prevention related to allergy and immunology.

MPED 8421 (Covenant Branch HSC) Preparation for Residency in Pediatrics (PREP) This course will allow students to have an in depth experience focusing on preparation for internship in pediatrics. Students will engage in simulation as well as small group discussions and activities. Students will also complete a standardized hand off curriculum and practice multiple patient management skills (fielding phone calls from nursing staff, addressing acute clinical changes in patients, writing orders and medication prescriptions, working with consultants and other health care team members, etc.). There will also be a focus on wellness and resiliency strategies for residency.

MPED 8422 (Covenant HSC, Lubbock HSC, Odessa HSC) Pediatric Subinternship Elective The student will work as a member of a team caring for patients in the pediatric subservice. The student will be actively involved in patient care, the student will have an opportunity to learn to formulate problem lists, management, and follow-up plans for hospitalized pediatric patients. The student assumes the role of extern and takes call with the residents.

MPED 8423 (Covenant HSC, Lubbock HSC, Odessa HSC) Neonatal Intensive Care Elective This selective/elective is designed to familiarize the student with perinatal-neonatal physiology, high-risk factors associated with neonatal disease pathophysiology diagnosis and management of common neonatal problems, dealing with acute neonatal emergencies, and communicating with parents of high-risk neonates. The students' primary responsibility will be the total management and supervision of assigned patients. Students will also be expected to participate in daily rounds, night call, weekly discussion group on neonatal-perinatal diseases and presentation of a review on a selected aspect of neonatal-perinatal medicine towards the end of the rotation.

MPED 8424 (Covenant HSC, Lubbock HSC, Odessa HSC) Pediatric Intensive Care Unit Elective The student will be exposed to many pediatric critical care conditions, the student will participate in the different phases of the patient's care with attending and residents, the student will have an opportunity to examine, formulate and act on the diagnosis of a patient with acute illness. The student will also have an opportunity to learn about and perform procedures such as central lines, airway management procedures (including intubation and BVM), A-line, central lines, chest tubes, and catheter placement. Emphasis will be placed on physiology and pathophysiology, recognition of common acute life-threatening illnesses/injuries, and stabilization of the critically-ill pediatric patient.

MPED 8426 (Covenant Branch HSC) Pediatric Emergency Medicine This course is for fourth year medical students interested in increasing their exposure to pediatric emergency medicine. This course is an elective and does not fulfill requirement for ED/ICU rotation.

MORS 8402 (Covenant Branch HSC, Lubbock HSC) Physical Medicine/Rehabilitation This rotation will introduce the basic concepts of physical medicine and rehabilitation.
This elective is designed to give the student an opportunity to work with hospitalized inpatients suffering from major psychiatric disorders (affective disorders, schizophrenia, and organic mental disorders). Special emphasis is placed on diagnosis and formulation of treatment plan. In addition, the student will also gain understanding of the disease addiction. Participants will either participate in the Inpatient Program, the Residential Day Treatment Program, or the Family Program. This experience will involve participating in treatment activities as well as educational and educational training program management activities. Participants will also meet as a group daily during that week to discuss the experiences of the student participants. Costs of travel, lodging, and fall will be provided for this training at the Betty Ford Center. The second week of the rotation will involve further discussion of the experience as well as preparation of a Medical Student Grand Rounds presentation to share with your fellow students your experiences and to discuss what you learned regarding the importance of substance use disorders. This is an integrative and problem based learning (HPS) medical student rotation. The student's interest is in preparing future physicians to optimally deal with evaluating and guiding patients to appropriate treatment when substance use is an issue. The Betty Ford Center is one of the premier treatment facilities in the country and its programs serves as a template for most of the substance use disorder treatment programs existing today. Interested students will be asked to complete a brief essay regarding their interest and goals for participating in the program and participant selection will be based on the essays and academic performance.

This rotation will familiarize students with common psychiatric diagnoses and treatments for children and adolescents. Students will observe and participate in the evaluation and treatment of children/adolescents in outpatient and inpatient settings. Particular emphasis will be given to improve student's skills in the areas of clinical judgment and decision-making. Students are encouraged to take increasing amounts of patient care responsibility while under close supervision. The student will attend family meetings and other relevant meetings. The student will be expected to lead at least 4 comprehensive child/adolescent psychiatric interviews, assess at least 2 child/adolescent inpatient consults and present at least 1 case to the attending using a biosychosocial formulation model for treatment plan. Depending on length of rotation the above will be modified.

This rotation is designed to teach fourth-year medical students principles and methods of population health practice and research. Students will spend approximately three half days per week with clinical and public health practice activities at the City of Amarillo Department of Public Health, City of Amarillo Department of Environmental Health, City of Amarillo Department of Emergency Management, and Region 1 Texas Department of State Health Services. The activities will include exposure in tuberculosis treatment clinics, specialty screening clinics, communicable disease clinics, and infectious disease clinics. Students will be expected to develop a thorough understanding of the disease of addiction. Participants will either participate in the Inpatient Program, the Residential Day Treatment Program, or the Family Program. This experience will involve participating in treatment activities as well as educational and educational training program management activities. Participants will also meet as a group daily during that week to discuss the experiences of the student participants. Costs of travel, lodging, and fall will be provided for this training at the Betty Ford Center. The second week of the rotation will involve further discussion of the experience as well as preparation of a Medical Student Grand Rounds presentation to share with your fellow students your experiences and to discuss what you learned regarding the importance of substance use disorders. This is an integrative and problem based learning (HPS) medical student rotation. The student's interest is in preparing future physicians to optimally deal with evaluating and guiding patients to appropriate treatment when substance use is an issue. The Betty Ford Center is one of the premier treatment facilities in the country and its programs serves as a template for most of the substance use disorder treatment programs existing today. Interested students will be asked to complete a brief essay regarding their interest and goals for participating in the program and participant selection will be based on the essays and academic performance.

This elective is designed to give students experience in evaluation, diagnosis, and management of patients with psychiatric illnesses. Students will engage in diagnostic assessment, formulation of a treatment plan and provision of psychotherapy and/or psychopharmacologic treatment. The student is expected to interact with patients and participate in discussions of treatment options.

This elective exposes the medical student to patients with diseases of the vascular system including peripheral arterial occlusive disease, carotid stenosis, aneurysms of the vascular system, and peripheral venous disease. The student will gain advanced knowledge of the pathology and the workup and management. The student will learn to evaluate these patients clinically, using non-invasive tests such as Duplex and invasive evaluation including angiography. The student will see and take care of vascular patients and this includes initial evaluation, management plan and participation in the treatment endovascular or operative. The student will follow these patients postoperatively in the intensive care until discharged.

This elective is designed to expose the students to the specialty of neurosurgery. This elective will allow both outpatient and inpatient care. During this rotation the student will participate in the management of patients with various neurosurgical diseases including brain tumors, aneurysms, and disorders of the spine. The student will also have strong exposure to neurosurgical trauma including operative management of intracranial bleedings and management of increased intracranial pressure. The student will actively participate in the patient's pre-, intra- and postoperatively and make daily rounds with the neurosurgery service both on the floor and in the intensive care.

This elective is designed to expose the students to the specialty of neurosurgery. This elective will allow both outpatient and inpatient care. During this rotation the student will participate in the management of patients with various neurosurgical diseases including brain tumors, aneurysms, and disorders of the spine. The student will also have strong exposure to neurosurgical trauma including operative management of intracranial bleedings and management of increased intracranial pressure. The student will actively participate in the patient's pre-, intra- and postoperatively and make daily rounds with the neurosurgery service both on the floor and in the intensive care.

This rotation will familiarize students with common psychiatric diagnoses and treatments for children and adolescents. Students will observe and participate in the evaluation and treatment of children/adolescents in outpatient and inpatient settings. Particular emphasis will be given to improve student's skills in the areas of clinical judgment and decision-making. Students are encouraged to take increasing amounts of patient care responsibility while under close supervision. The student will attend family meetings and other relevant meetings. The student will be expected to lead at least 4 comprehensive child/adolescent psychiatric interviews, assess at least 2 child/adolescent inpatient consults and present at least 1 case to the attending using a biosychosocial formulation model for treatment plan. Depending on length of rotation the above will be modified.

This rotation exposes the medical student to patients with diseases of the vascular system including peripheral arterial occlusive disease, carotid stenosis, aneurysms of the vascular system, and peripheral venous disease. The student will gain advanced knowledge of the pathology and the workup and management. The student will learn to evaluate these patients clinically, using non-invasive tests such as Duplex and invasive evaluation including angiography. The student will see and take care of vascular patients and this includes initial evaluation, management plan and participation in the treatment endovascular or operative. The student will follow these patients postoperatively in the intensive care until discharged.

This rotation is designed to give students insight into all aspects of female breast disease. The student will participate in the outpatient clinics evaluating patients and participate in the diagnosis and treatment of benign and malignant disease. The student will assist on breast biopsies in the outpatient clinic and will assist at hospital operative procedures. The student will spend time with the medical oncologist in the outpatient setting and at the Infusion Center. The student will also spend time at the Breast Imaging Center assisting with mammography and ultrasound.

This rotation is designed to provide MS4 students who intend to match to a surgical residency position to participate in the surgical residency program for their internship year. The course is based on the ACS/APSOS/ASE Entering Surgery Resident Prep Curriculum and includes numerous sessions scheduled in the simulation lab and in the operating room. The student will get hands-on experience in tasks that they will be expected to perform as a beginning intern. Some examples of skills covered include order writing, performing patient hand-offs, handling emergency patient scenarios, performing surgical procedures and managing surgical patients. The course will also address issues related to professionalism, communication skills, evidence based medicine and systems processes.
Acute Care Surgery
The student will observe and participate in all phases of radiological diagnosis to include fluoroscopy, plain film interpretation, special procedures, nuclear imaging, diagnostic ultrasound, and computed tomography where available. A large number and variety of patients are available at the affiliated teaching hospitals.

MSUR 8421 (Lubbock HSC) Burn Intensive Care Unit Elective During this rotation, the fourth year medical student will become intimately involved with the management and care of burn patients ranging from the most severe injury with life threatening burns to the less severe, both adult and pediatric patients.

MSUR 8424 (Covenant Branch HSC) Neurological Surgery Sub I Elective The Neurological Surgery Sub-I elective offers fourth year medical students with a strong interest in the Neurological Surgery specialty, an opportunity to acquire and assimilate advanced clinical responsibilities at an intern level, by exposure to neurological patients in various settings: inpatient, outpatient, and operating room. This four-week elective rotation will provide an educational curriculum that emphasizes teaching of fundamental concepts of total patient care. The sub-intern will be assigned to a faculty mentor.

MSUR 8425 (Lubbock HSC) Colorectal Surgery Elective This course will expose 4th year medical students to the field of colon and rectal surgery. They will have the opportunity to participate in the outpatient clinic as well as procedures. Procedures will include colonoscopies, benign anorectal cases, advanced laparoscopy, as well as large open abdominal surgeries.

MSUR 8426 (Odessa HSC) Cardiovascular Surgery Elective The student will observe and participate in all phases of radiological diagnosis to include fluoroscopy, plain film interpretation, special procedures, nuclear imaging, diagnostic ultrasound, and computed tomography where available. A large number and variety of patients are available at the affiliated teaching hospitals.

MSUR 8427 (Lubbock HSC) Neurological Intensive Care Unit Elective This rotation exposes the fourth-year medical student to the most critically ill patients with neurological pathology. The student will be an integral part of a team from neurosurgery, anesthesia, and other departments, led by an attending physician. Medical students will be assigned patients appropriate for their level of training. The students will learn to thoroughly evaluate the overall condition of the patient and develop and implement a management plan. The students will become familiar with common neurological conditions including vascular pathology and hemorrhage, closed and open head trauma, and increased intracranial pressure, as well as neuro-ophthalmology and management of intracranial pressure monitors and external ventricular drains. Additionally, the student will become familiar with common ICU management practices including central lines, arterial lines, and ventilator management. The student will be expected to round daily with the attending and the team. The student may participate in additional educational activities within the Departments of Surgery including ICU lectures, Morbidity and Mortality conferences and Grand Rounds.

MSUR 8405 (Amarillo HSC, Lubbock HSC, Odessa HSC) Urology Elective This elective is an advanced experience in the management of disorders of the urinary tract and is designed to provide the student with an understanding of the principles of urological diagnosis and treatment. Included with this elective are a series of lectures, ward rounds, operating room and clinical experiences with a review of pathology. The course is of value to both a primary care physician as well as a student interested in a career as an urologist.
