Although the COVID-19 pandemic has caused massive disruption to healthcare education across the U.S., it has also prompted us to reconsider new pedagogies and strategies for interprofessional education (IPE). Taking advantage of this disruption in healthcare education to pioneer innovative approaches to IPE has potentially led to more flexible and inclusive interprofessional teaching and learning outcomes for all. We now have an opportunity to create engaging, collaborative learning experiences with improved flexibility and outcomes that still ensure a focus on team-based population health and patient-centered care. During this Conversations in IPE virtual event, we will explore the evolving world of hybrid IPE, as well as share lessons-learned and next steps in implementing a flexible and engaging IPE curriculum. The event will include a keynote presentation by Dr. Anthony Breitbach, moderated breakout rooms dedicated to IPE innovation, and group discussions/debriefs. We hope you join us for this virtual Conversation in IPE!

Featuring

Anthony Breitbach PhD, ATC, FASAHP, FNAP
Professor
Interim Chair, Department of Nutrition and Dietetics
Director, Athletic Training Program
Saint Louis University

Keynote Presentation Title:
Navigating Our New “Normal” – Interprofessional Collaboration in an Evolving Education and Healthcare Paradigm
